18. Who sees what

1. Getting started

The KAD Motors Field Visits app is your tool in the field: plan visits, check in, take orders, record payments and see your customers' debts. It installs on your phone as an app (PWA) and keeps working with no internet.

1. Open the app link in your phone browser (Safari on iPhone, Chrome on Android).
2. Enter the email and password your administrator gave you and tap “Log in”.
3. Add the app to your home screen: iPhone “Share → Add to Home Screen”, Android “Install”. It then opens in one tap and runs faster.
4. Change your password right away: Settings → Change password.

Tip

Language (Armenian/English) and dark mode are in Settings. If the app looks out of date, tap “Check for updates” in Settings.

2. Finding your way around

The bottom bar has five main sections. The big round button in the middle is the Map, the screen you will use most.

Section	What it is for
Home	Next visit, this week’s progress, quick-action buttons
Activity	History of your visits, searchable by time, region and outcome
Map	All your customers on a map, check-in, add a new customer
Customers	A list with search, filters and sorting
Orders	Your orders and their statuses

Top right: the bell (notifications) and the menu icon, which opens Settings. The “Quick actions” grid on Home leads to everything else: Route Plans, Payments, Cash expense, Products, Team Performance, Reports, Debt Balances, Bonuses.

Tip

Everything you see is yours: a sales manager only sees customers assigned to them, plus their own visits, orders and payments.

3. Your day at a glance

1. In the morning open Home: check the “Next visit” card and this week's progress.
2. Check your Route Plan if needed: which customers are you visiting today?
3. At the customer, tap “Check in” (Map or Home) and record the visit outcome.
4. If the customer wants to order, create the order from the same screen (“New order”).
5. If you received a payment, record it under Payments and later hand the cash over (Cash handovers).
6. At the end of the day look at Activity and Reports to make sure visits and new customers were recorded.

Important

A visit only counts after the check-in. Without a check-in your weekly progress will not move.

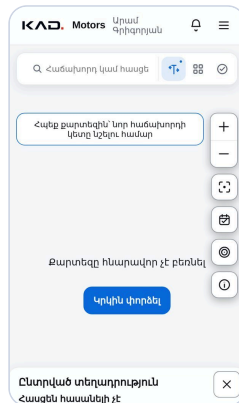

4. Map and new customers

Your customers appear on the map as pins. Green: our customers; red: potential (not yet linked to the ERP); the green tick means visited. The “i” button explains the symbols. The search box at the top finds a customer or an address.

The green bar at the bottom shows the nearest customer and the distance; tap its button to check in. The buttons on the right zoom, centre on your position, open the day plan and the filters.

Adding a new customer

1. Tap the blue “New customer” button (bottom right of the map) or “Add new customer” on Home.
2. Tap the map where the customer is and confirm the location.
3. Fill in the name, type (Oil change point, Shop, Workshop, Other), phone and address. Region, subregion and sales channel fill in automatically.
4. Save. The customer starts as “Potential” until an ERP number is entered.

Placing a new customer

Tip

New customers show up in Reports → New customers, only yours.

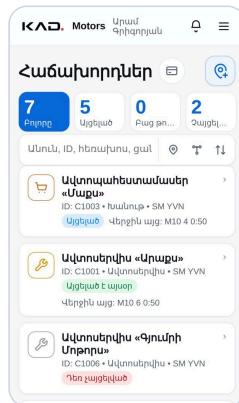

5. Customers

The four cards at the top filter the list: All, Visited, Overdue, Not visited. The search box matches name, ERP ID, phone, address and social links.

- A card's icon shows the customer type; its colour shows the tier (gold, silver, bronze).
- The “Visited today” / “Last visit” line shows when you were last there.
- The “+” button top right adds a customer; the card icon shows/hides debt.

Filters and sorting

- Region → subregion: an expandable tree with tri-state checkboxes (whole region, partly, none).
- Customer type and tier: the same kind of tree, by type (Workshop, Shop, Oil change point) and tier (Gold, Silver, Bronze, Potential).
- Sort by name, last visit, last added or distance; tap the same option again to reverse the order.

Customer list

6. The customer card

The card shows the location, phone, channel and assigned manager, visit frequency, payment terms, this month's sales, unpaid debt (for ERP-linked customers), and the last order and visit.

- Buttons below: Check in, Navigate (Yandex Navi / Google Maps), Orders, New order, Photos.
- The visit history lists previous visits and their outcomes.
- To change details tap the pencil. A manager's changes go to an administrator for approval (“Your changes were sent...”).
- The tier (Bronze/Silver/Gold) comes from the company's ERP data and is refreshed automatically from the Excel file; it is not edited by hand.

Important

Debt and order/payment history are visible only for ERP-linked customers assigned to you.

The screenshot shows the 'Ավտոսերվիս «Արաքս»' (Auto Service 'Araks') customer card. It includes contact information: address (Երևան, Կենտրոն - Տիգրան Մեծի 12), phone (+374 77 101111), and email (SM YVN - Արամ Գրիգորյան). It also shows a visit date (2026-10-06) and a status (0 դր.).

Customer card

7. Check-in (recording a visit)

1. At the customer tap "Check in". The app verifies your GPS position (accuracy shown as " $\pm m$ ").
2. If you are within the allowed radius you see a green confirmation ("You are ...m from the customer").
3. Select the visit outcome (one or several): Order placed, No order, Payment collected (enter the amount), Revisit, Assortment check, Products delivered, Complaint, Other.
4. Mark which brands are available at the point (Castrol, Lotos, Royal, competitors).
5. Optionally add a note and a photo (High quality for price tags), then tap "Send check-in".

The screenshot shows the 'Check-in' page. It includes a green confirmation message: 'Տեղադրությունը որոշված է (±m հեռավորություն)' (Location is determined (±m distance)). Below this, there are buttons for 'Տեղադրությունը հաստատված է' (Location is confirmed) and 'Պատվերը չկա' (No order). There are also buttons for 'Վճարում է արժեքը' (Payment is made), 'Կրկին այցելել' (Visit again), 'Տեսակետը փոխել' (Change view), and 'Վերադառնալ' (Return). At the bottom, there are buttons for 'Castrol', 'Lotos', 'Royal', and 'Արևիկա'.

Check-in page

Tip

With no internet the check-in is stored on the phone ("Offline — check-in waiting to sync") and is sent automatically when the connection returns.

Important

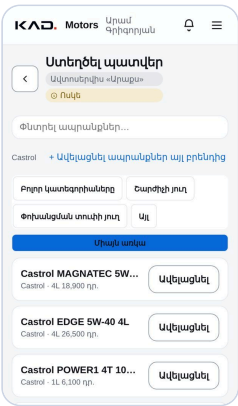

If you are outside the allowed radius the visit is still saved, but its location is marked as not verified. Move closer to the customer or wait for the GPS accuracy to improve.

8. Orders

Creating an order

1. On the customer card, or during a check-in, tap “New order”.
2. Pick the brand (e.g. Castrol), then a category (Engine oil, Transmission, Hydraulic, Antifreeze, Grease, EV fluids, Other) or search by name.
3. Tap “Add” and set the quantity. The price follows the customer's tier: bronze, silver or gold price (gold customers can have individually agreed prices). If a tier price is empty, the next lower tier's price is used.
4. Tap “Save order”. If the customer has no ERP ID yet the order stays a “Draft”: enter the ERP ID to submit it.

A discount (% or fixed amount) needs the director's approval; until then the order cannot be fulfilled. Orders at full price do not.

Statuses

Status	Meaning
Submitted	Your order is created and waits for confirmation
Confirmed	Approved by management
Packed / Stock out	Warehouse has prepared and released it
Delivered	Handed over to the customer
Draft	Not submitted yet (e.g. no ERP ID); always shown last

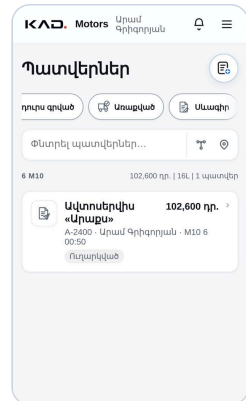

Tip

In the Orders tab the status chips run in order (All → Submitted → ... → Draft). Drafts are always the last chip so active orders stay up front.

9. The orders list

The top row holds the status chips (swipe sideways); below are search and the region/channel filter. Each month header shows the total amount, litres and number of orders.

- Tap an order to see its items, prices and status history.
- A draft order can be completed and submitted later.
- The button top right creates a new order.

Status filters

10. Payments and cash handovers

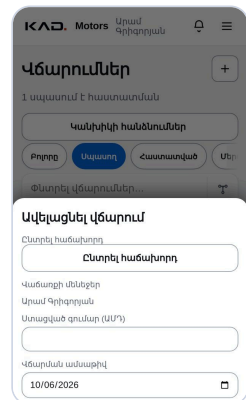

When a customer pays you, record the payment in the app.

1. Home → Payments → “+”.
2. Choose the customer, enter the amount received (AMD, whole number), the date and an optional note.
3. Tap “Submit payment”. It appears as “Awaiting approval”.

Statuses: Awaiting approval, Approved, Rejected. The accountant approves.

Cash handovers

If the payment was cash, tap “Cash handovers”, choose which payments' cash you are handing over and to whom (your sales director). The recipient counts the money and confirms receipt; the cash then moves on to the accountant. A confirmed receipt closes your responsibility for it.

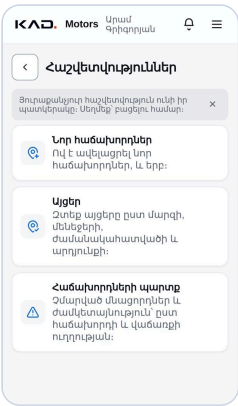

Recording a payment

Important

Cash expenses (fuel, travel, ...) are recorded separately: Home → Cash expense → “Add expense”.

11. Reports (your own data)

Home → Reports. A sales manager has three reports. They show ONLY your own data; other managers' data never appears.

Report list

Report	What it shows
New customers	Customers you added in the chosen period (this month, region, type, tier)
Visits	The visits you made, by region, category, period and outcome
Customer debt	Unpaid balances of the customers assigned to you, by age (0–30, 31–60, 61–90 days, ...)

Each report has filters at the top: choose the period and region and the list updates immediately.

12. Debt balances

“Customer debt” shows the debts of the customers assigned to you: the total, the number of customers with a debt, a split by age and a customer list with the last payment.

- The top line shows when the data was last refreshed (“Castrol data as of ...”). It comes from the company Excel file, so it can lag by hours or a day.
- The “Debt only” filter hides customers whose balance is 0.
- When a customer owes money, remind them during the visit and record any payment you receive right away.

Tip

Watch the oldest buckets (61–90 days and beyond) first.

Customer debt

13. Products and pricelist

Home → Products. Only active products (currently on sale) are listed; inactive ones are hidden. Products are ordered by brand, family, viscosity and size.

- Search by name, filter by brand and category.
- The retail price is shown here. The price for your customer's tier (bronze/silver/gold) appears when you create an order.
- You can select products and share the pricelist with a customer (buttons top right).

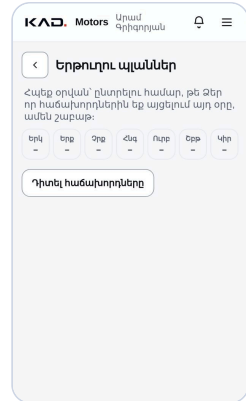

Product list

14. Route plans

Home → Route Plans. Pick a weekday to see/choose which of your customers you visit that day, every week. The “Unplanned” list shows customers not on any day yet.

- Today's plan appears on Home in the “Next visit” card and in the weekly progress.
- On the Map, “Plan day” lets you choose customers by channel/region/subregion (expandable tree).

- A plan may need approval; its status is shown (“Awaiting approval” / “Approved”).

Weekly plan

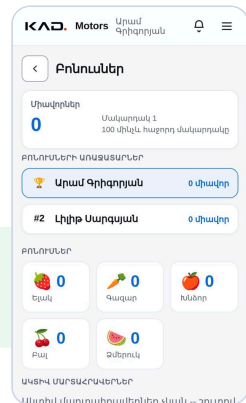

15. Team Performance and Bonuses

Team Performance: if you have a sales channel assigned, you see sales and collections against plan. If not, the page explains it is only available to managers with an assigned channel.

Bonuses: when the administrator has enabled the module you see your points, level, active challenges (e.g. visit or sales goals), fruit badges and the month's leaders.

Tip

Points come from correctly recorded visits, so always record each visit with a check-in.

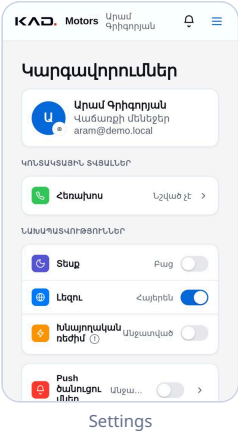

Bonuses

16. Settings

- Phone: your contact number.
- Dark mode and Language (Armenian/English).
- Power-saving mode: lighter animations for slower phones.
- Push notifications: allow them for order status, plans and reminders.
- Sync: shows sync status. “Refresh data” and “Refresh product catalogue” load fresh data.

- Offline storage: how much data is kept on the phone.
- Security: Change password, Manage sessions (sign out other devices).
- User guide: this document. “Check for updates” installs a new app version.

17. FAQ and troubleshooting

Problem	What to do
The map does not load	Check your internet and tap “Try again”. On a computer, hard-refresh (Ctrl/Cmd+Shift+R).
Location is not verified	Move closer, wait for the GPS accuracy ($\pm m$) to drop, allow location access.
I cannot see a customer	Only customers assigned to you are shown. If you think you should see it, ask your sales director.
Order stays a Draft	The customer's ERP ID is missing: enter it (or ask the accountant) and submit the order.
The price looks off	Price depends on the customer's tier (bronze/silver/gold). The tier is updated from the Excel file, not by hand.
Debt does not match	Debt comes from Excel and can lag; check the “data as of” time.
The app looks old	Settings → Check for updates.
No internet	Keep working; check-ins and orders are stored and sent when the connection returns.

For anything else contact your sales director or the administrator.

18. Who sees what

Role	Main abilities
Sales manager (you)	Only own customers, visits, orders, payments; own reports: new customers, visits, debt
Sales director	All managers' data, approves orders, reassigns customers, plans routes
CEO / Operations director	Full visibility and approvals
Accountant	Approves payments, product prices, ERP data
Warehouse / Delivery	Packing and delivering orders
Administrator	Users, settings, full access
