KAD OS

powered by Castrol

The operating system for a modern Castrol distributor.

The app, feature by feature · KAD Motors, Armenia · November 2026

Demo data

ABOUT THIS PRESENTATION

Built by a distributor, shared to help other distributors

Built inside a real distributor

Our sales, warehouse, accounting and management teams designed every screen around their daily work.

Shared at Castrol's request

Castrol's team saw the app and asked us to share its best ideas with other distributors.

How to read it

Each module: what it solves, how it works step by step, real screens, and a demo video.

MODULES IN THIS DECK

Home screen · Customers & map · Check-in · Orders · Credit & cash · Warehouse · Delivery & driver · Management · Executive Assistant · AI agent · Next: customer app

WHAT IS KAD OS?

One app for everyone in a Castrol distributor

Field sales, customers, orders, credit, cash, warehouse, delivery, the team and management reports in one system, with AI that keeps everyone on plan.

Sales reps

Visit, check in, take orders and payments

Sales director

Plans routes, approves prices and credit

Warehouse

Packs confirmed orders, counts stock

Driver

Delivers on an optimised route; customer signs

Accountant

Invoices, payments and cash

CEO

Live dashboards and an evening report

PROBLEMS IT SOLVES

Six everyday problems, and how KAD OS solves each one

Visits hard to monitor

GPS check-in with a photo at the field

Orders by phone

Orders in the app at fixed price lists

Overdue debt found late

Debt per invoice and automatic collection tasks

No view of the shelf

A Castrol shelf check at every visit

Reports that take days

Live dashboards and daily evening reports

Problems noticed too late

An AI agent gives and chases tasks

HOW IT WORKS

How KAD OS works, in four simple steps

1. The team works in the app

Visits, orders, payments, packing and deliveries are recorded where they happen

2. KAD OS checks the rules

Prices, discounts, credit and stock, at once

3. AI spots problems

Gives a task to the right person, with a deadline

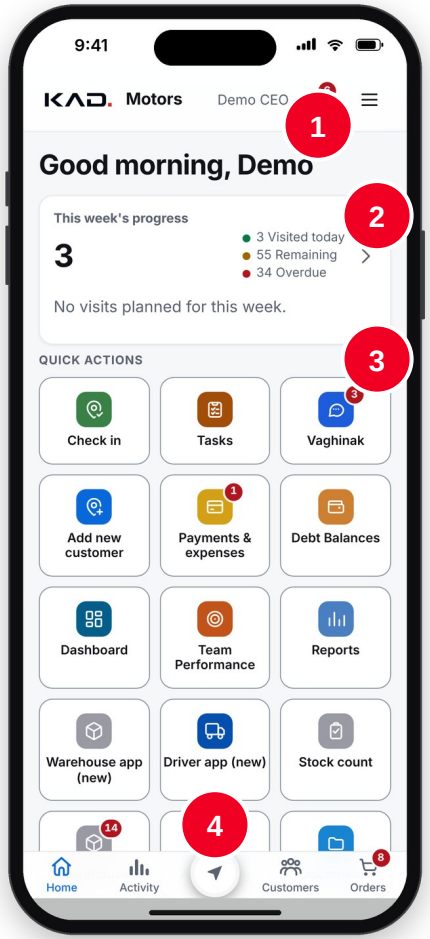

4. Management sees it live

Dashboards, reports and an evening summary

One cloud system. Customers, products, orders, money, stock and tasks live in one secure database. The accounting system is connected through the integration API, so nobody types anything twice.

THE HOME SCREEN

One home screen: every part one tap away

1 Notifications and menu

Approvals, alerts and settings, top right

2 This week's progress

Visited today, remaining and overdue customers

3 Quick actions

Each tile opens a module (list on the right)

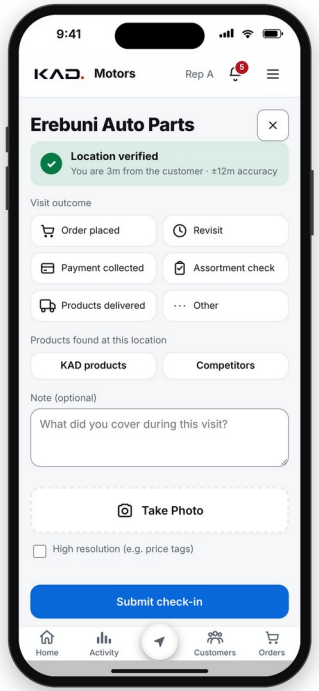

4 Bottom bar

Home, Activity, Map in the centre, Customers, Orders

QUICK ACTIONS

- **Check in** — start a visit
- **Tasks** — today's to-dos
- **AI agent** — messages and questions
- **Add new customer** — from the map
- **Payments & expenses** — cash and receipts
- **Debt balances** — who owes what
- **Dashboard** — sales vs plan
- **Team performance** — per rep
- **Reports** — all reports
- **Warehouse app** — pack and stock
- **Driver app** — routes and delivery
- **Stock count** — daily counting

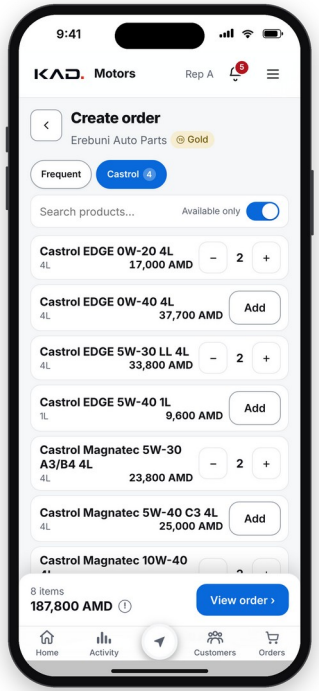

From the shop counter to the CEO's phone, in one flow

09:40

Rep checks in

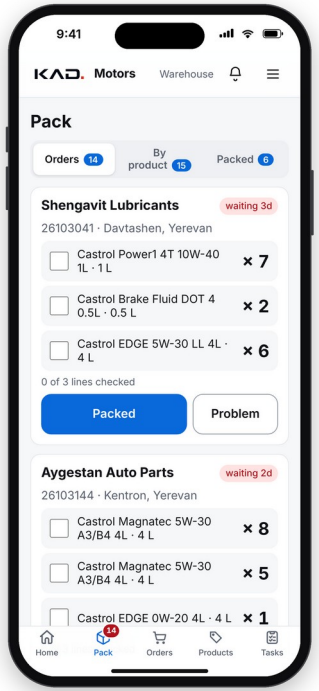

GPS + photo at the customer

09:52

Takes the order

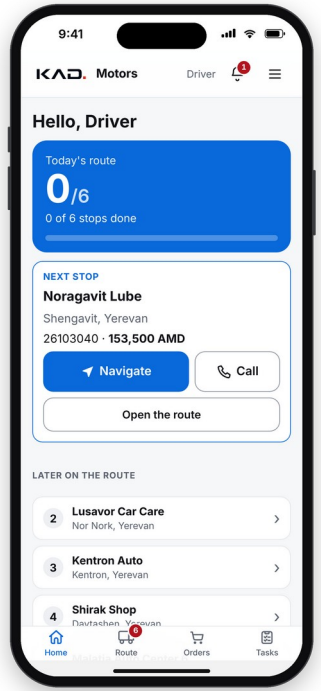

Right prices, usual basket

11:30

Warehouse packs

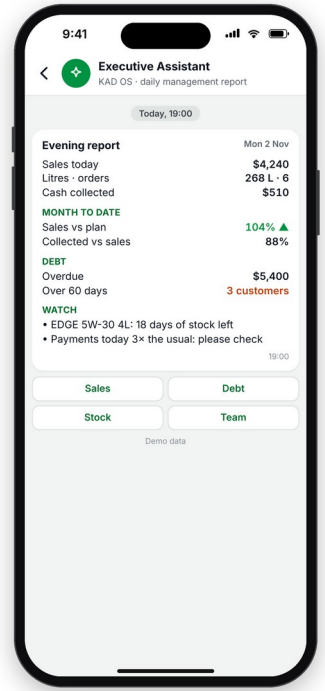

Tick lines, press Packed

15:10

Driver delivers

Next stop, customer signs

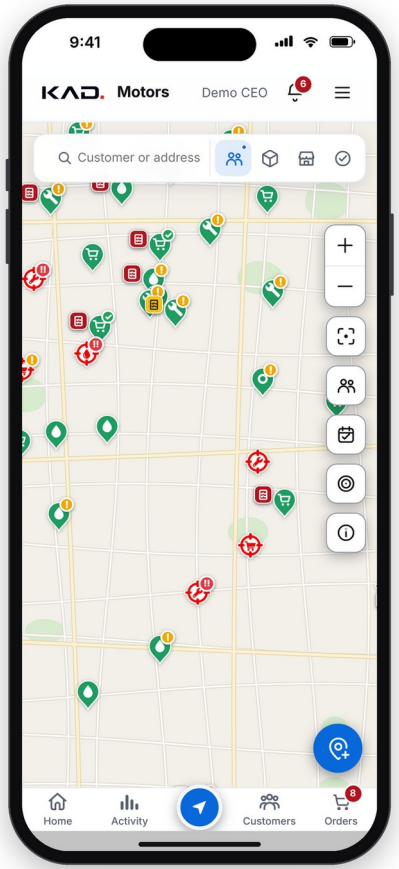

19:00

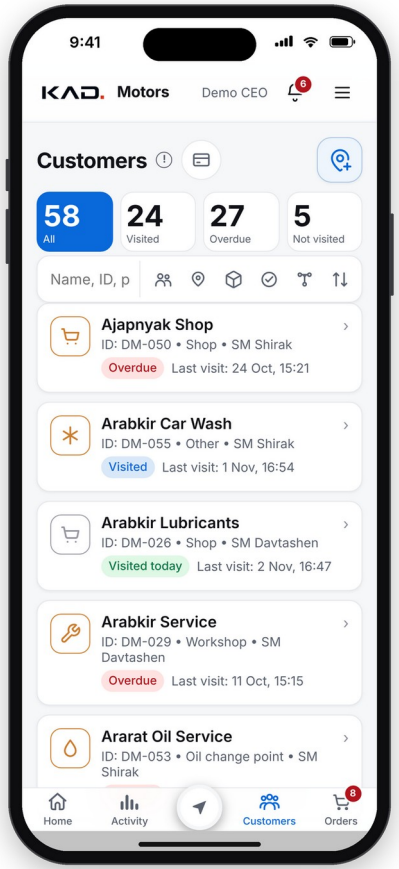

CEO gets the report

Sales, cash, debt, risks

Existing and potential customers, on one map

Map

Customer list

1 Every customer on the map

Pins show the type and visit status; tap a pin for debt, last order and last visit

2 Existing and potential customers

We add shops that do not buy yet, with a potential level and reasons

3 New customer from the map

The rep adds the shop where he stands; region and rep are filled in automatically

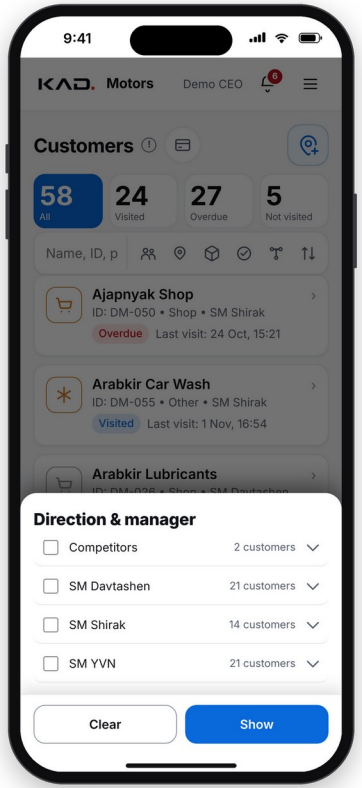

4 Search everything

Name, ID, phone, address or social profile in one search box

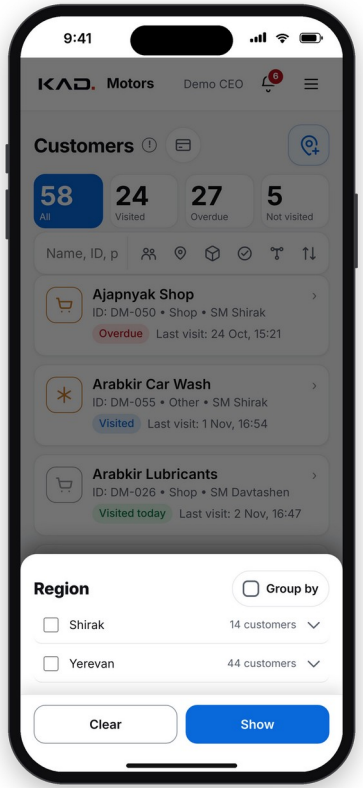

5 Visit plans

Each customer has a visit frequency; overdue customers are flagged

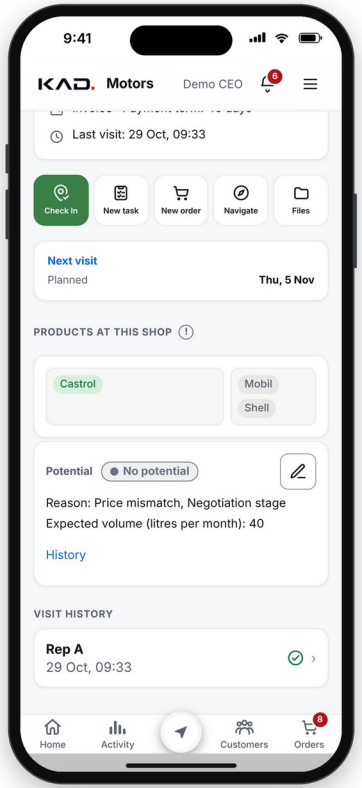

Advanced filters find the right customers in seconds

Channel & rep

Region

Potential customer

1. **By channel and rep**
   Pick sales channels and reps in one tree

2. **By region and district**
   Every region opens into its districts

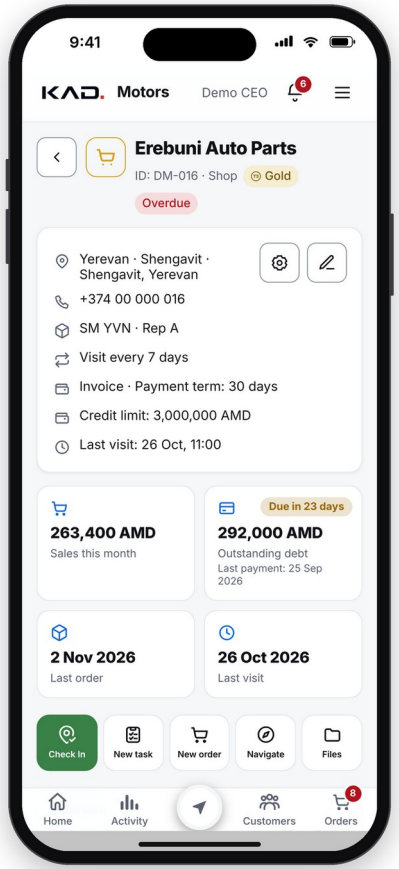

3. **By products on the shelf**
   For example: shops with fake product, or without Castrol

4. **By potential**
   Level, reason, follow-up date and expected volume

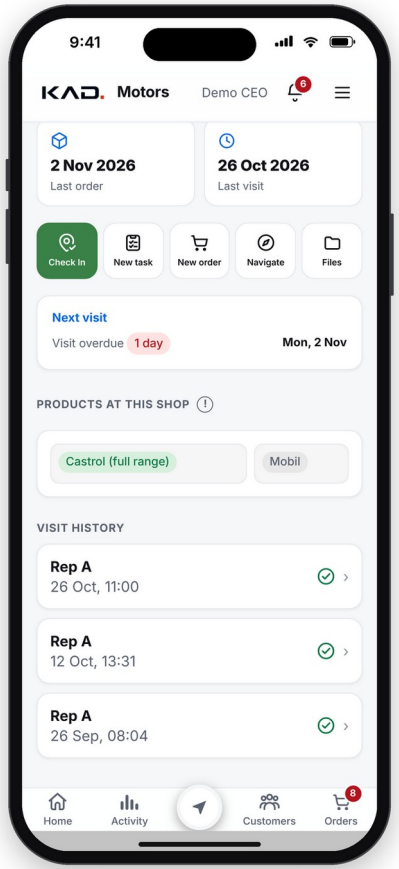

5. **By visit status**
   Visited, overdue or never visited, with counts

CUSTOMER CARD

Everything about a customer, on one screen

Top of the card

Scrolled down

1. **Profile**
   Address, phone, channel, rep, visit frequency, payment term, credit limit

2. **Money at a glance**
   Sales this month and outstanding debt, with a due-date chip and last payment

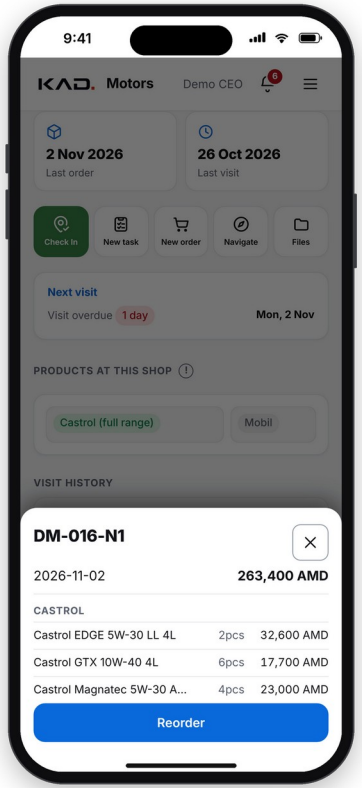

3. **Dates that matter**
   Last order and last visit; next planned visit

4. **Products at this shop**
   Castrol on the shelf, full range, competitors seen

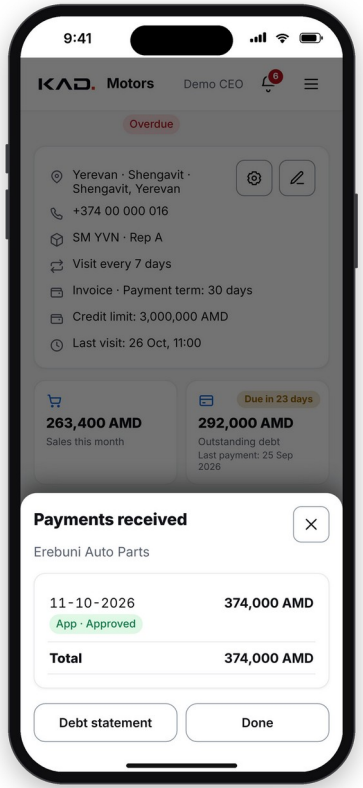

5. **Visit history and actions**
   Check in, new task, new order, navigate, files

CUSTOMER CARD

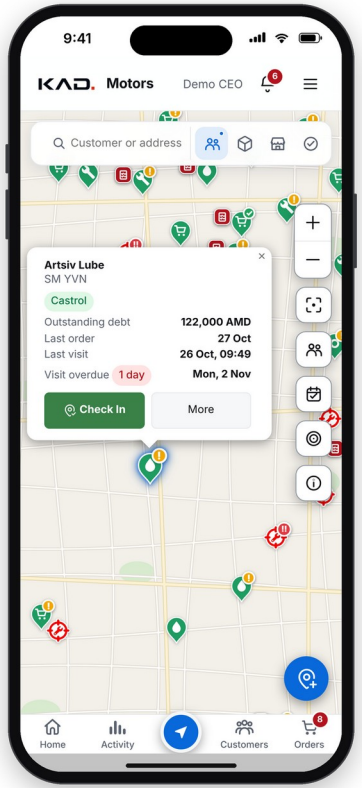

One tap opens the full detail

Last order

Payments received

Map pin

1 Tap Last order

The full order opens: every product, quantity and amount, with Reorder

2 Tap Outstanding debt

Every payment received, and a one-page debt statement for the customer

3 Tap a pin on the map

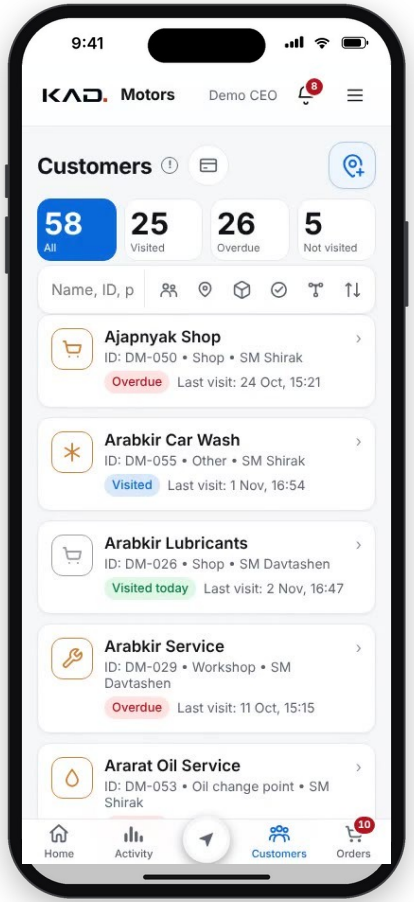

Debt, last order, last visit and Check In, without leaving the map

4 Long-press New order

Order the usual basket or repeat any past order

CUSTOMER CARD

Demo: from the customer list to the full picture

▶ DEMO VIDEO

What you see in the video

1. **Search**
   Type part of the name; the list filters as you type

2. **Open the card**
   Profile, money, dates, products at this shop

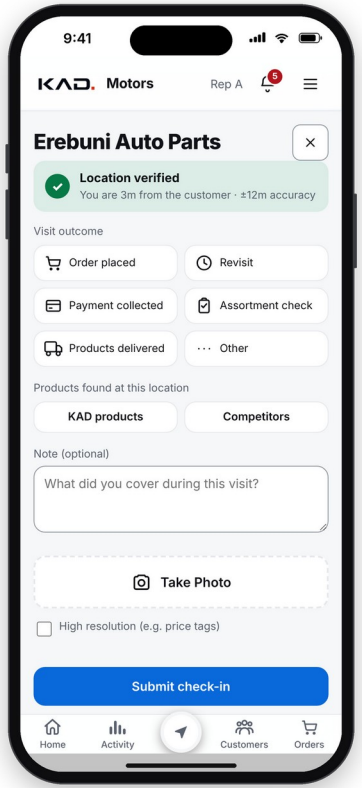

3. **Last order**
   Tap the tile: the full order list opens

4. **Payments**
   Tap the debt tile: payments received and debt statement

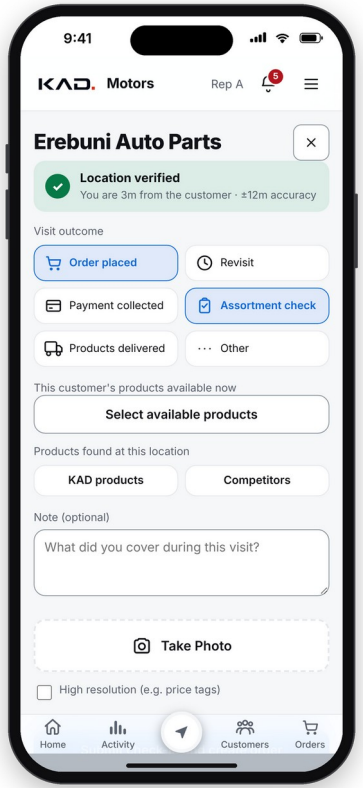

In this PDF: a still. The video plays in the PowerPoint version; the files are in kados/videos/.

CHECK-IN

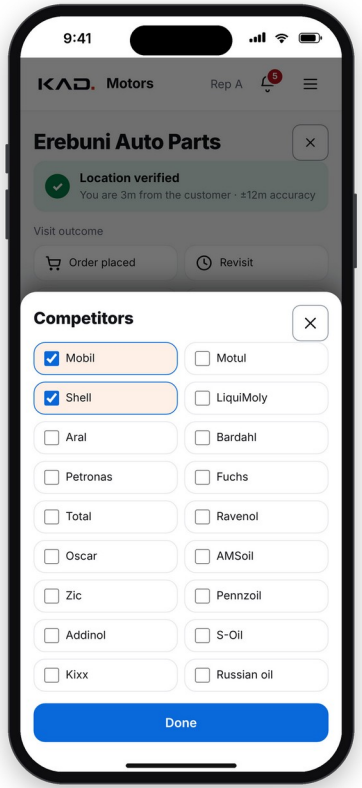

Check-in, step by step

Location verified

Visit outcome

Competitors

1. **Open the customer, tap Check In**

   The phone finds the GPS position at once

2. **Location verified**

   Accepted only within 300 m of the customer; the distance and accuracy are saved

3. **Choose what happened**

   Order placed, payment collected, assortment check, delivery, revisit

4. **Record the shelf**

   Castrol: available, full range, fake; competitors seen

5. **Note and photo**

   A short note and a photo; high resolution for price tags

6. **Submit**

   Works without signal; with Order placed, the order screen opens next

CHECK-IN

Visits that cannot be faked, and shelf data for the brand

Too far: refused

Shelf check

1 Too far? Refused

6 km away, the app blocks the check-in and offers "Wrong pin? See the map"

2 Wrong pins are found

Repeated GPS evidence shows customers whose map pin is wrong

3 Visit length

Start and end of each visit are recorded

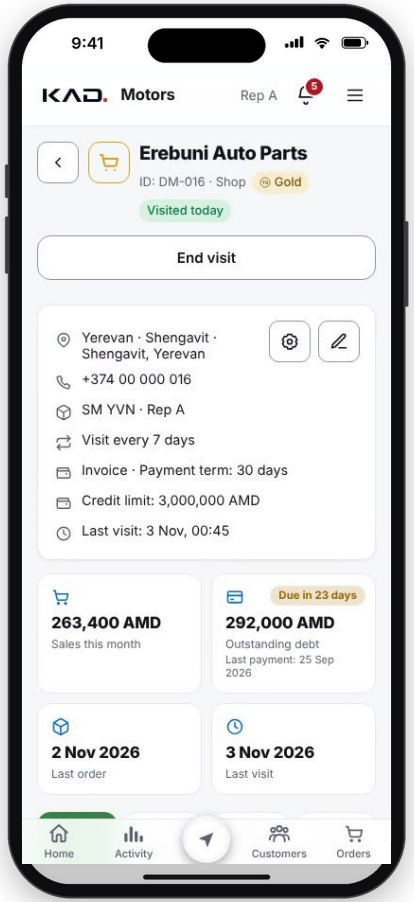

4 Castrol shelf check

Available, full range or fake product, outlet by outlet

5 Management sees it

Visit history per customer and per rep, with time and place

Demo: a complete check-in

DEMO VIDEO

What you see in the video

1. **Open the customer**
   Tap Check In: location verified in seconds

2. **Visit outcome**
   Order placed and assortment check

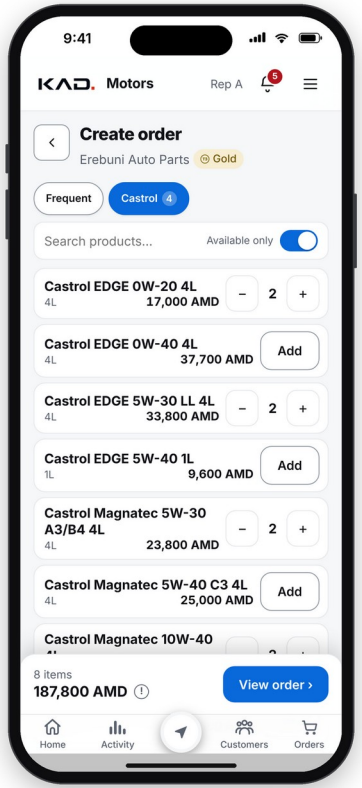

3. **Competitors on the shelf**
   Tick the brands seen

4. **Note and submit**
   Then the order menu opens: new, usual or repeat

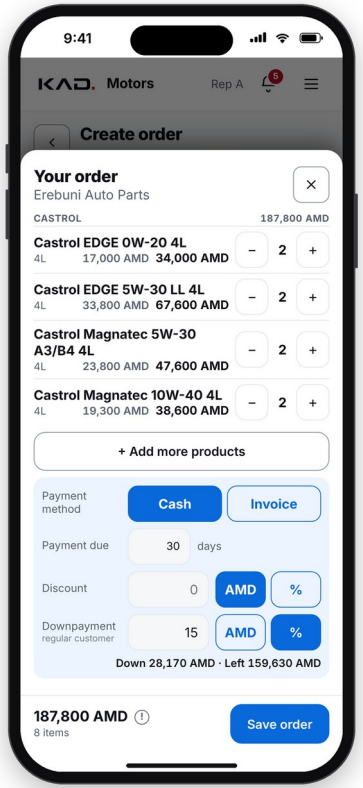

In this PDF: a still. The video plays in the PowerPoint version; the files are in kados/videos/.

ORDERS

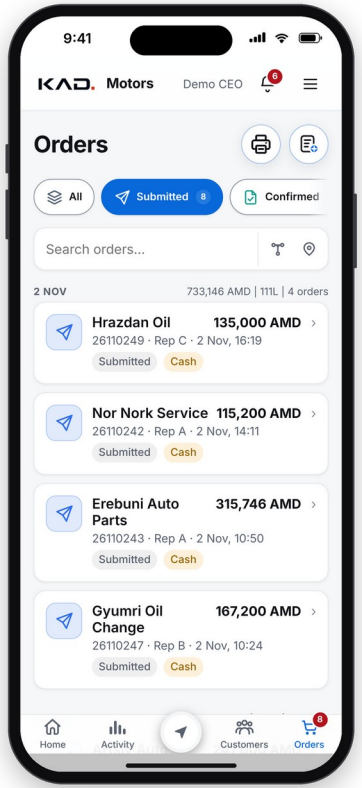

An order in a few taps, at the right price

Pick products

Review

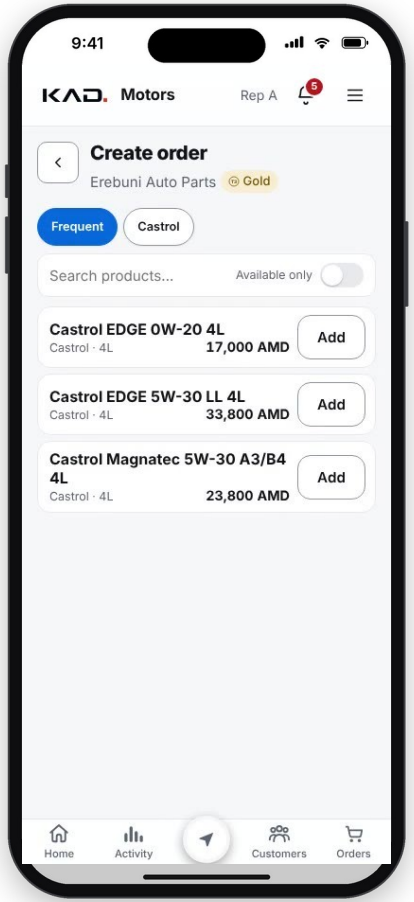

Orders list

1. **Start the way you want**
   New order, the customer's usual basket, or repeat a past order
2. **Pick products**
   Frequent products first; brand chips and search; stock shown
3. **Review the order**
   Payment method, due days, discount and down payment
4. **Rules are checked**
   Customer-level prices, discount approval, credit limit, price floor
5. **Live status**
   Submitted, confirmed, packed, delivered; everyone sees it

ORDERS

Demo: an order from start to saved

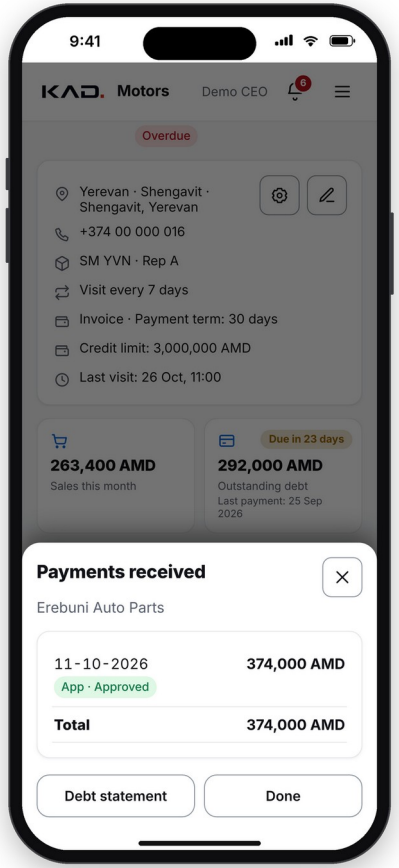

DEMO VIDEO

What you see in the video

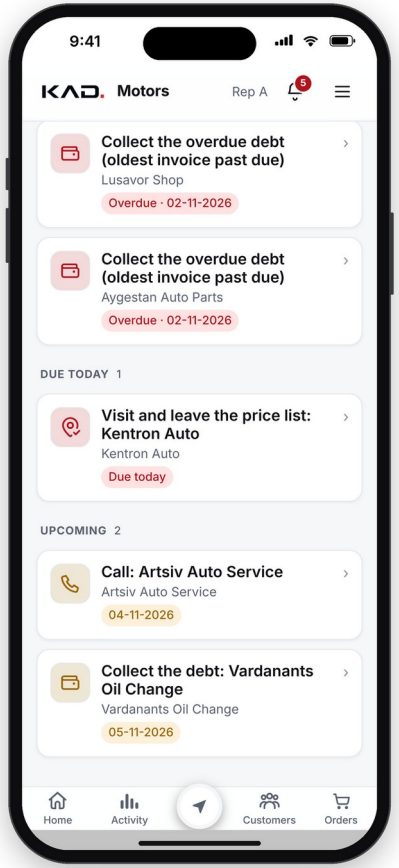

1. **Choose products**
   Tap Castrol, then Add; adjust quantities
2. **Review**
   View order: lines, payment method, due days
3. **Invoice or cash**
   One tap sets the payment method
4. **Save**
   Order saved: print or share the order form

In this PDF: a still. The video plays in the PowerPoint version; the files are in kados/videos/.

Credit and cash under control, without chasing

Payments received

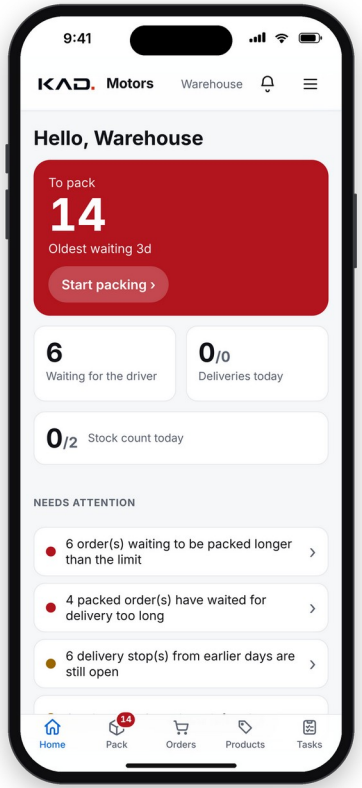

Tasks

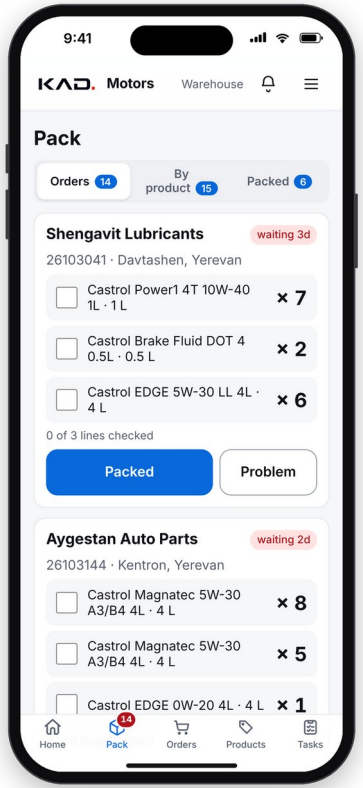

1. **Credit limit per customer**
   Over the limit, the order waits for approval
2. **Debt per invoice**
   Every unpaid invoice with its due date; red when overdue
3. **Collection task**
   Overdue debt becomes a task for the rep's next visit
4. **Promise date**
   The rep records when the customer will pay; a broken promise goes to the sales director
5. **Payment at the visit**
   Recorded on the phone and tracked until it reaches the accountant
6. **Debt statement**
   A one-page downloadable PDF for the customer

WAREHOUSE

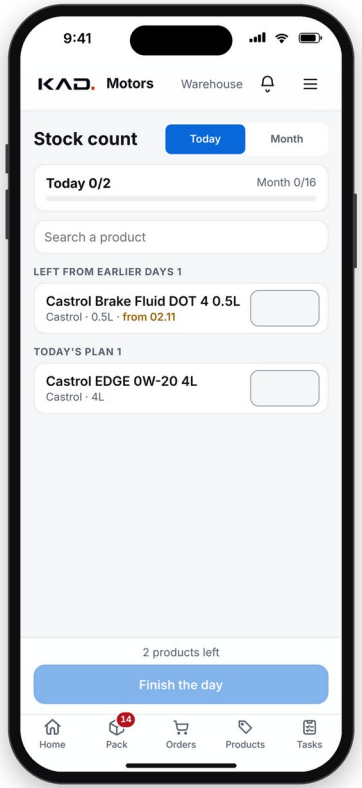

The warehouse packs from the phone

Warehouse home

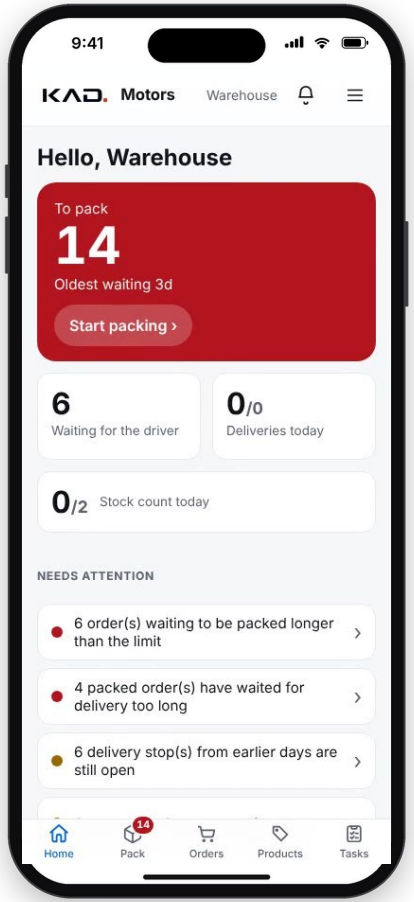

Pack

Stock count

1. **What to do now**
   Home shows orders to pack, the oldest waiting, and what is late
2. **Pick and pack**
   One card per order: tick each line while picking, then Packed
3. **By product**
   One pick list across all orders; short stock in red
4. **Problem button**
   A missing product is reported, not hidden
5. **Daily stock count**
   Every product counted once a month, a few each day, blind
6. **Reorder list**
   Days of stock left and what to buy

Demo: packing an order

DEMO VIDEO

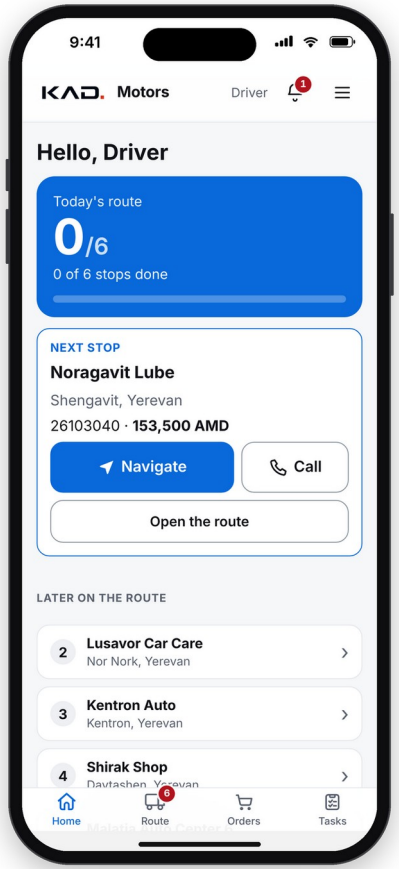

What you see in the video

1. **Warehouse home**
   Orders to pack and the oldest waiting
2. **Start packing**
   One card per order
3. **Tick the lines**
   While picking from the shelf
4. **Packed**
   The order moves to Packed and waits for the driver

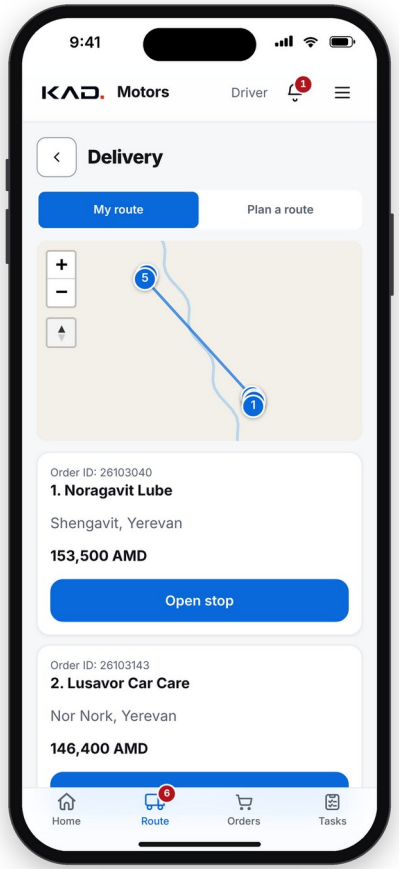

In this PDF: a still. The video plays in the PowerPoint version; the files are in kados/videos/.

DELIVERY & DRIVER

Deliveries on an optimised route, signed on the phone

Driver home

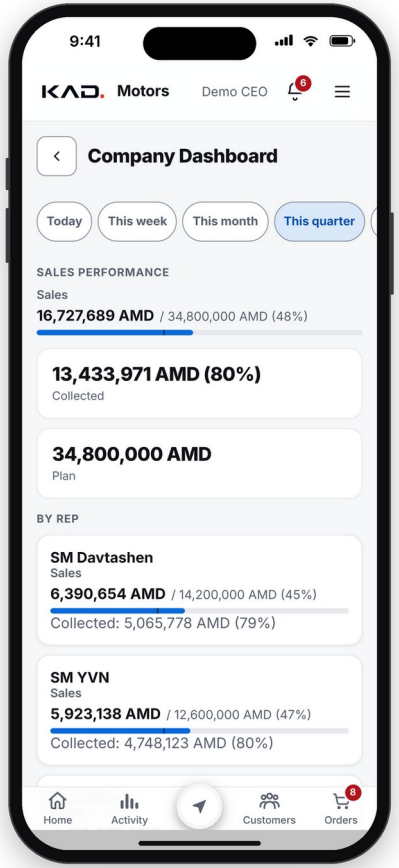

Route

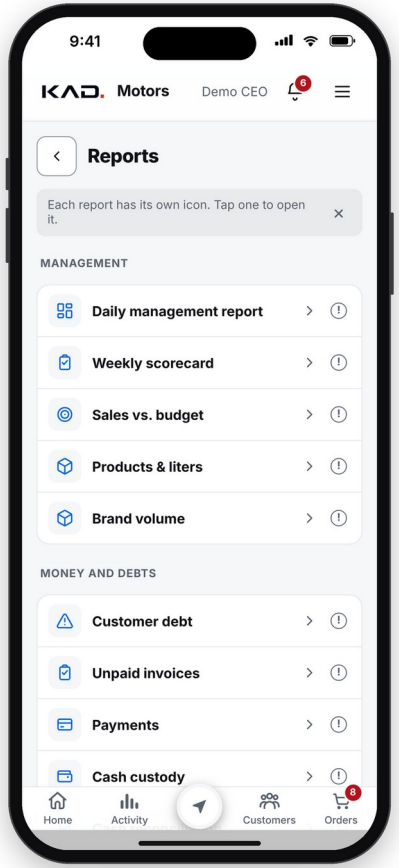

1. **Route in one tap**
   Packed orders become a route in the shortest order
2. **Next stop first**
   Navigate and Call buttons; later stops below
3. **Arrival detected**
   When the driver reaches the customer: off, one-tap Delivered, or automatic
4. **Customer signs**
   Signature on the phone; cash collected is recorded
5. **Failed delivery**
   A reason is recorded and the order goes back to the plan
6. **Everyone sees it**
   The order turns Delivered for the rep and the office

MANAGEMENT

Management sees the business live

Dashboard

Reports

1 Live dashboard

Sales against plan, by rep and channel

2 Targets and bonuses

Each rep sees plan, progress and points

3 Team scorecards

Visits, orders and payments per rep, each week

4 Reports

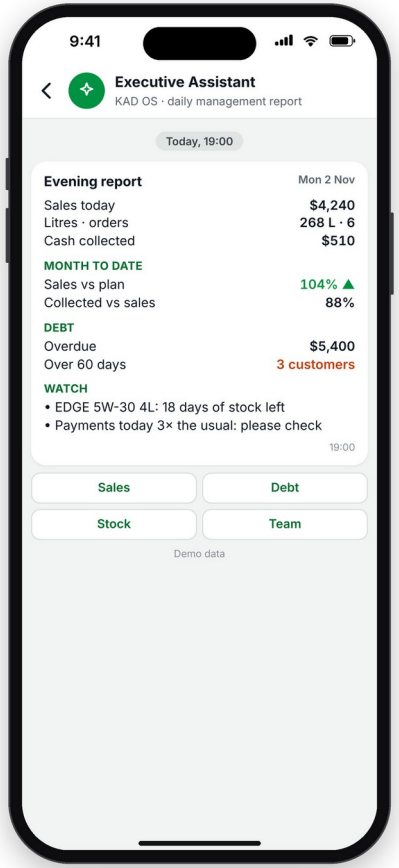

Money and debt, sales and litres, team, stock

5 Right data for each role

A rep sees only own customers

EXECUTIVE ASSISTANT

An evening report on the CEO's phone, every day

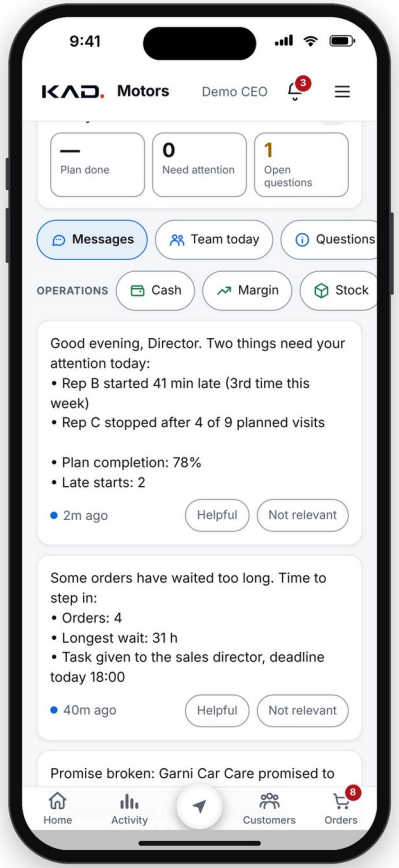

Evening report

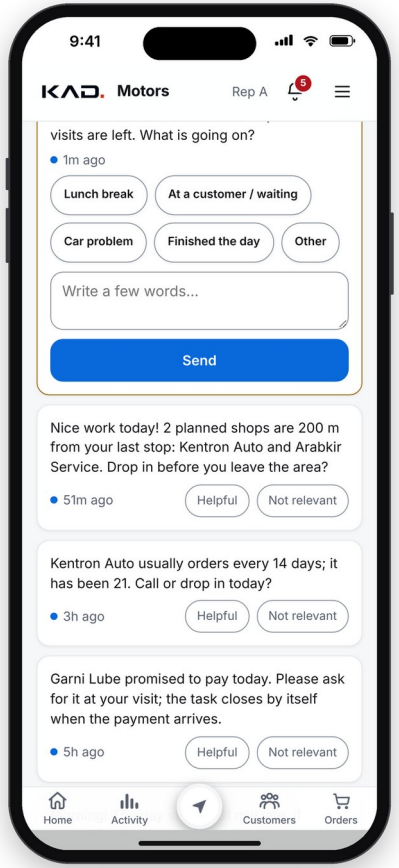

1. **Sales and volume**
   Today and month to date, against plan
2. **Cash and debt**
   Collected today, overdue, oldest debts
3. **Stock risks**
   Products about to run out
4. **Unusual numbers**
   Anything far from normal is flagged
5. **Weekly and monthly**
   Longer summaries at the end of each period

AI AGENT

An AI agent keeps everyone on plan

Management view

Rep view

1. **Watches the working day**
   Late starts, missed visits, long office stays
2. **Keeps visits on route**
   Reminds reps about planned shops nearby
3. **Chases money**
   Overdue debt, down payments, broken promises
4. **Gives and closes tasks**
   Right person, deadline; closes itself when done
5. **Asks and escalates**
   Some questions must be answered; management hears only what slips

AI AND AUTOMATION

AI and automatic calculations do the routine work

AI analyst: ask your data

Management asks a question in plain words and gets an answer with numbers:

“Which customers bought less EDGE this quarter, and who is their rep?”

Customers and staff are hidden behind codes

Read-only, every question logged

CALCULATED AUTOMATICALLY

- Landing cost of every product
- True cost at the selling price, for each discount
- Debt age of every invoice
- Suggested credit limit per customer
- Each customer's usual basket and order rhythm
- Days of stock left and what to reorder
- Optimised delivery route
- Rep working hours and weekly scorecards
- Fuel allowance from the real GPS route

BUILT FOR REAL FIELD WORK

Works on any phone, fast, offline and secure

Any phone or PC

Opens from a link; no app store

Works offline

Visits, orders and counts wait on the phone and send later

Fast on cheap phones

Speed is tested on a slow phone

Role-based access

Everyone sees only what their role allows

Secure

Encrypted connection, protected logins, audit trail

Data stays with us

Our data lives in our own cloud system

BUILT AND ADOPTED

Live in 3 months, used by the whole team in the 4th month

3 months

from first line of code to the first live version

May → August 2026

4th month

the whole field team working in the app

September 2026

6th month

to the complete system shown today

763 improvements, delivered every week

May 2026
Work starts

Aug
First version live

September
Whole field team in the app

Today
Complete system, weekly updates

COMING NEXT

Next: KAD OS for our customers

We are opening the app to our customers, so shops and garages can work with us directly.

Online orders

Order any time, at the customer's own prices

Offers and discounts

Promotions shown on the customer's dashboard

Orders and balance

Every order, its status, and the current balance

Notifications

Automatic, when an order is placed and when a payment arrives, cash or bank

Why it matters: fewer calls and errors, faster payments, and customers who order Castrol more often.

KAD OS

powered by Castrol

The operating system for a modern Castrol distributor.
