KAD OS

powered by Castrol

The operating system for a modern Castrol distributor.

For Castrol sales & marketing teams · KAD Motors, Armenia · November 2026

Demo data

THE BLIND SPOT

11 everyday problems, and how KAD OS answers each one

Was the field really visited?

GPS check-in with a photo; refused beyond 300 m

What is on the shelf?

A Castrol shelf check at every visit

Where is fake product sold?

Fake product flagged, field by field

Which competitors are in the shop?

Competitor brands recorded at every visit

Which shops don't buy Castrol?

Potential customers with level, reason and expected litres

Orders by phone, or on paper

In the app: fixed prices, automatic discounts and offers; a bigger discount goes to the manager

Reports that take days

Live dashboard, plus daily, weekly and monthly reports to the sales head, CEO or anyone

Problems found too late

An AI agent checks everything, one by one, and finds the problems

Tasks lost in calls and chats

Tasks in the app: the manager reviews each visit and sets tasks; the AI agent creates and follows them too

"How much does this shop owe?"

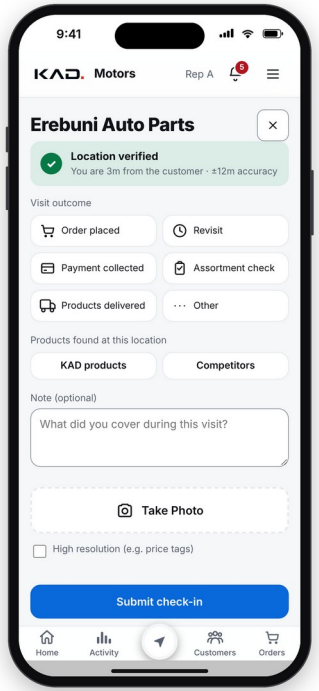

Debt visible in the app: no call to accounting before collecting cash

Do our offers reach the shop?

Next: offers on the customer's own dashboard

11 questions.
One app.

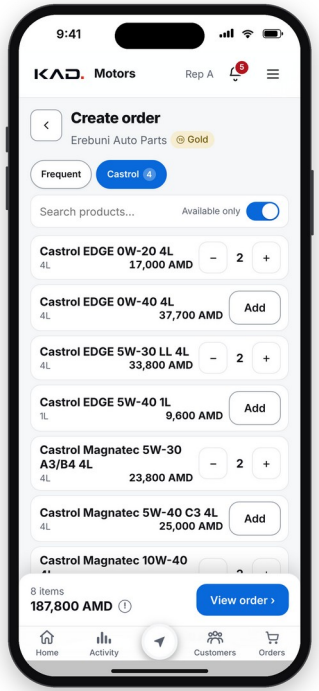

The entire process from A to Z, in one flow

09:40

Rep checks in

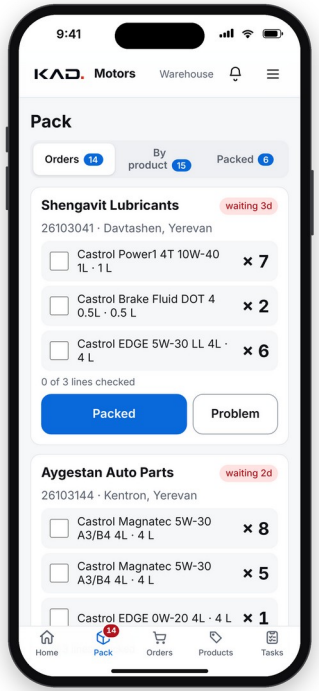

GPS + photo at the customer

09:52

Takes the order

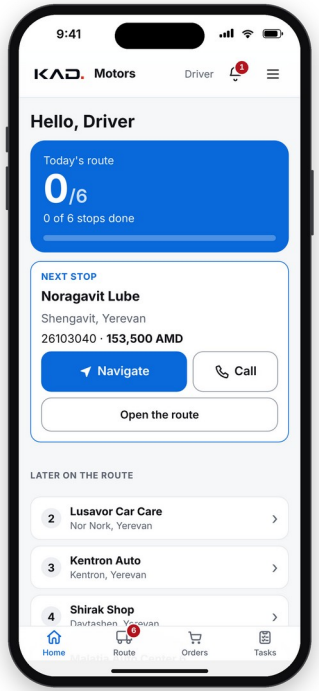

Right prices, usual basket

11:30

Warehouse packs

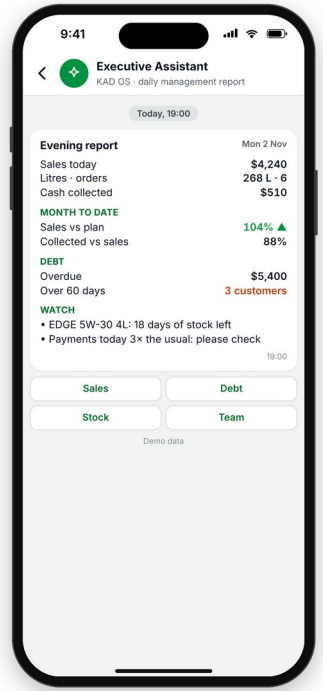

Tick lines, press Packed

15:10

Driver delivers

Next stop, customer signs

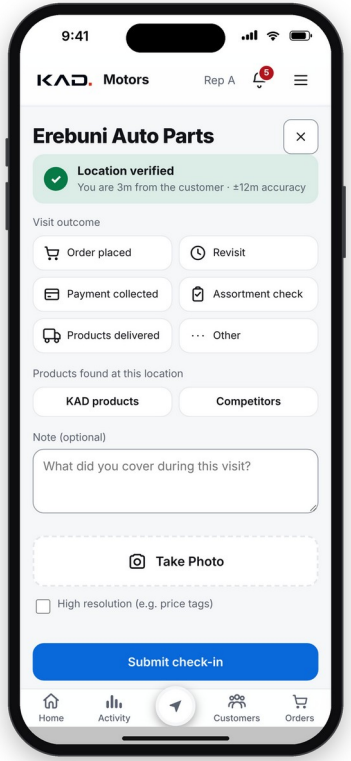

19:00

Reporting

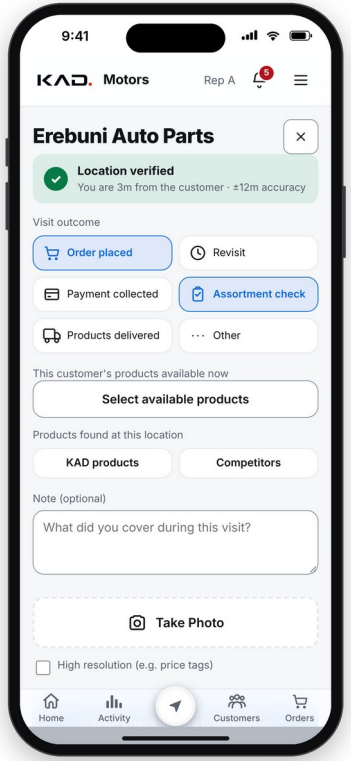

Sales, cash, debt, risks

CHECK-IN

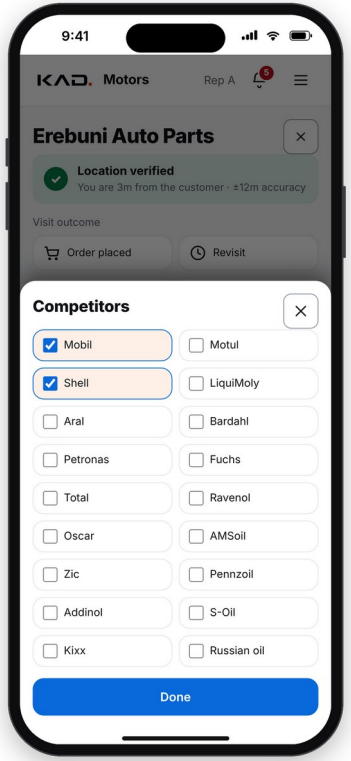

A visit in under a minute, with the shelf on record

Location verified

Visit outcome

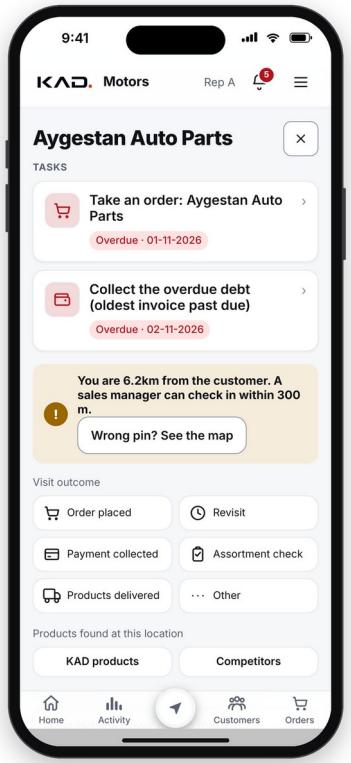

Competitors

1. **Open the customer, tap Check In**
   The phone finds the GPS position at once
2. **Location verified**
   Accepted only within 300 m; the distance and accuracy are saved
3. **Choose what happened**
   Order, payment, assortment check, delivery, revisit
4. **Record the shelf**
   Castrol available, full range or fake; competitors seen
5. **Note and photo**
   High resolution for price tags
6. **Submit, even offline**
   With an order, the order screen opens next

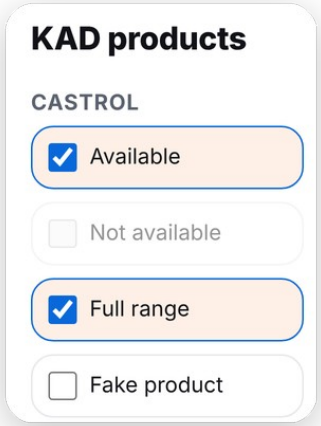

Why it matters for Castrol: every visit brings back shelf, fake-product and competitor data, field by field.

CHECK-IN

Visits that cannot be faked

Too far: refused

Shelf check

1 Too far? Refused

6 km away, the app blocks the check-in and offers "Wrong pin? See the map"

2 Wrong pins are found

Repeated GPS evidence shows customers whose map pin is wrong

3 Visit length

The start and end of each visit are recorded

4 Castrol shelf check

Available, full range or fake product, field by field

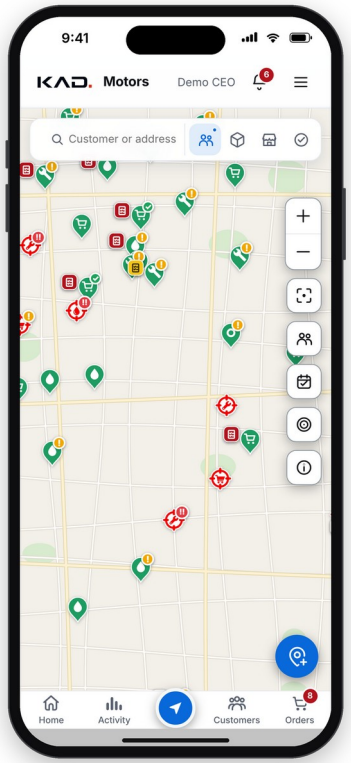

5 Management sees it

Visit history per customer and per rep, with time and place

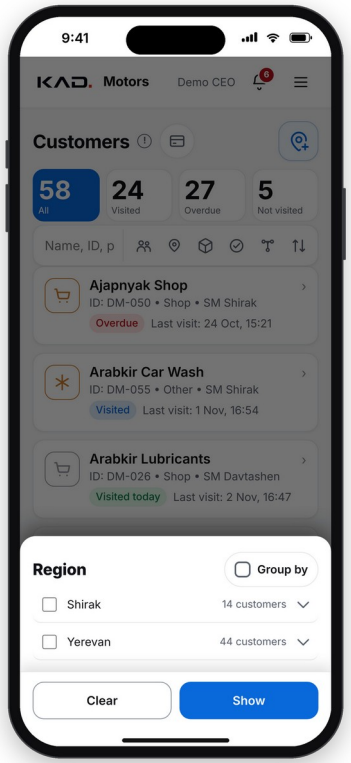

Why it matters for Castrol: the visit reports you receive are proven, not written from the office.

CUSTOMERS & FILTERS

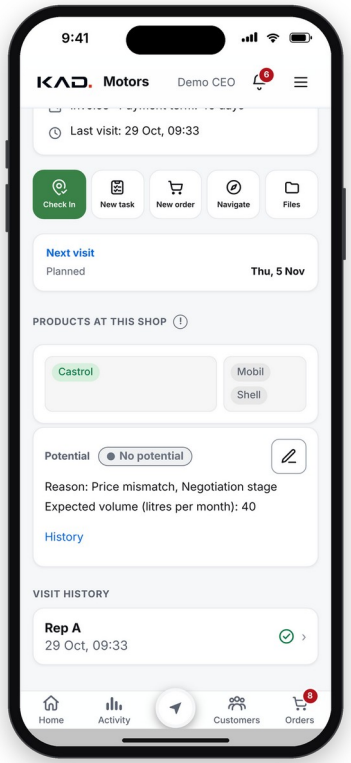

Every customer on one map, found in seconds

Map

Region filter

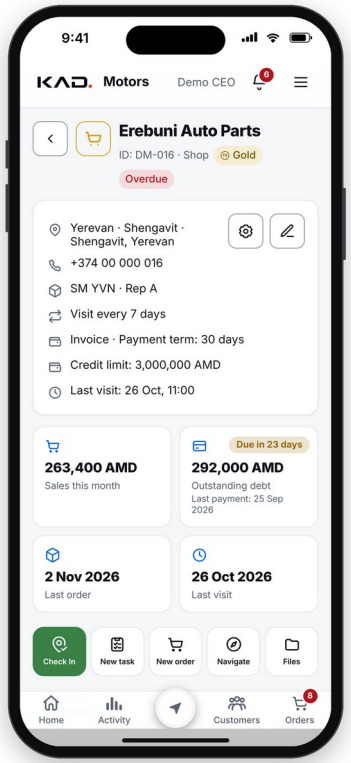

Potential customer

1. **Every customer on the map**
   Pins show type and visit status; one tap shows debt, last order, last visit
2. **Potential customers too**
   Shops that do not buy yet, with level, reason and expected litres
3. **New customer from the map**
   Added where the rep stands; region and rep filled in
4. **Filters for everything**
   Channel, rep, region, district, visit status
5. **Filter by the shelf**
   For example: shops with fake product, or without Castrol

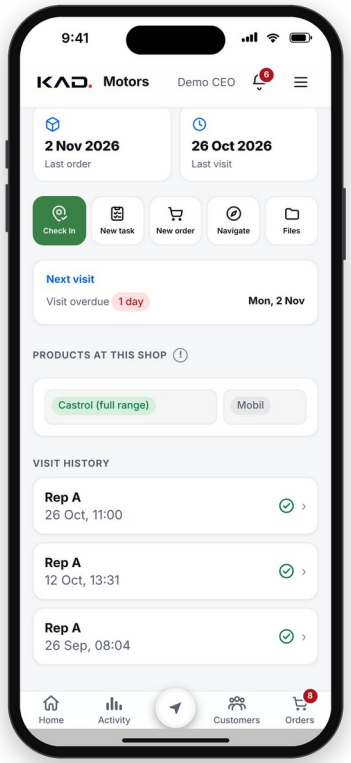

Why it matters for Castrol: a target list for any campaign in one minute: region, shelf, potential.

CUSTOMER CARD

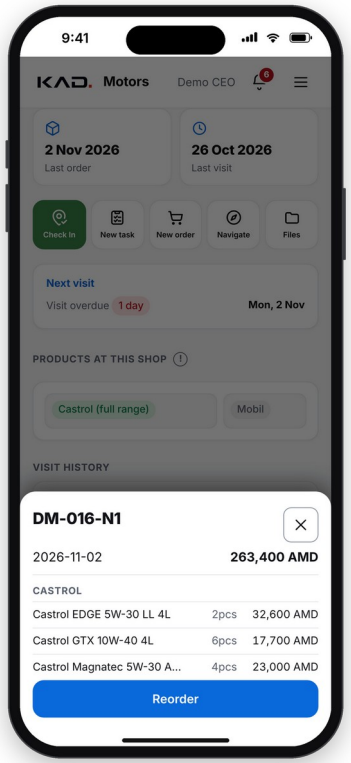

The whole story of one customer, on one screen

Top of the card

Scrolled down

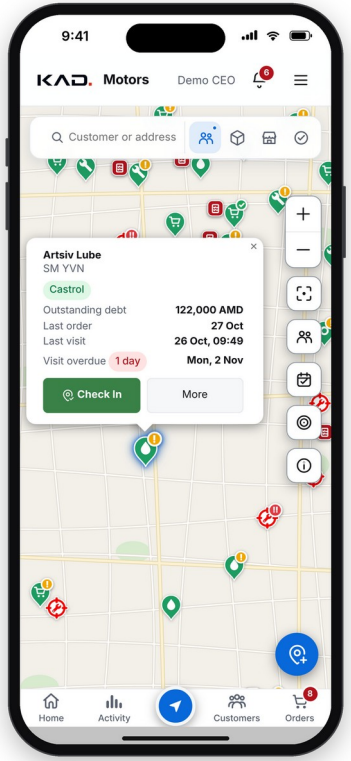

Last order

1. **Profile**
   Address, phone, channel, rep, visit frequency, payment term, credit limit
2. **Money at a glance**
   Sales this month, debt with its due date, last payment
3. **Dates that matter**
   Last order, last visit, next planned visit
4. **Products at this shop**
   Castrol on the shelf, full range, competitors seen
5. **One tap to the detail**
   Last order with every line and Reorder; visit history; new task

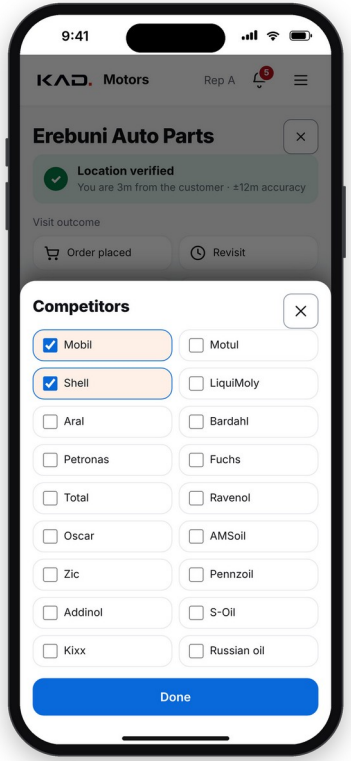

Why it matters for Castrol: the rep walks in knowing the customer: what they buy, what is on the shelf, what they owe.

FIELD INTELLIGENCE

What the field data gives Castrol sales & marketing

Map pin

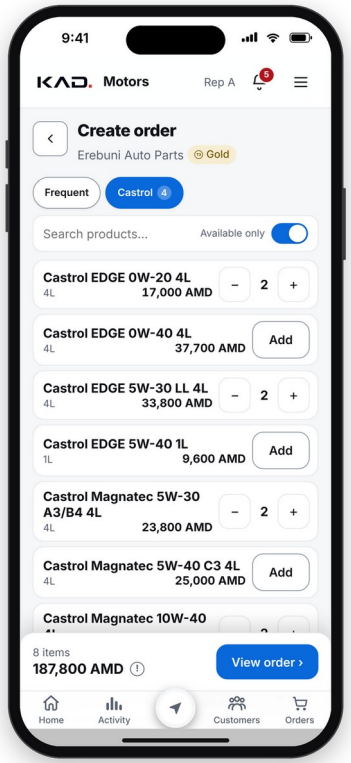

Competitors on the shelf

1. **Distribution gaps**
   Shops without Castrol on the shelf, by region and district
2. **Fake product hotspots**
   Every field where fake product was seen, with the visit date and photo
3. **Competitor presence**
   Which brands each shop carries, recorded at every visit
4. **Customers to win next**
   Potential customers with level, reason and expected litres a month
5. **Order rhythm**
   Each customer's usual basket and how often it orders; a gap becomes a task
6. **Campaign follow-up**
   Shelf checks before and after a campaign, field by field

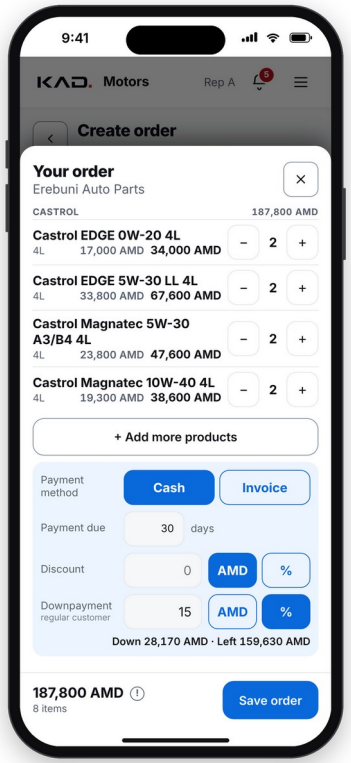

Why it matters for Castrol: you stop asking the distributor for a report and start working from live field data.

ORDERS

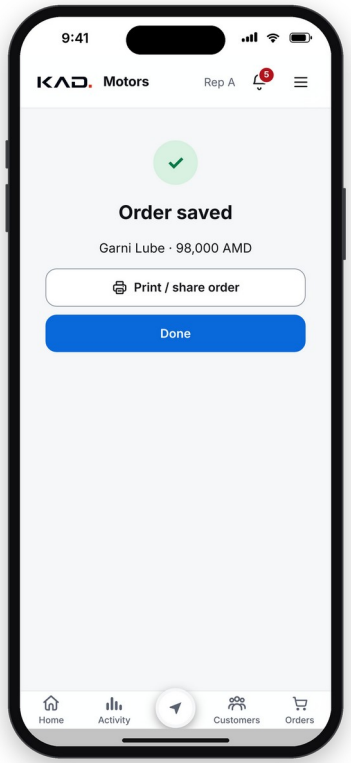

Orders in a few taps, at the right price

Pick products

Review

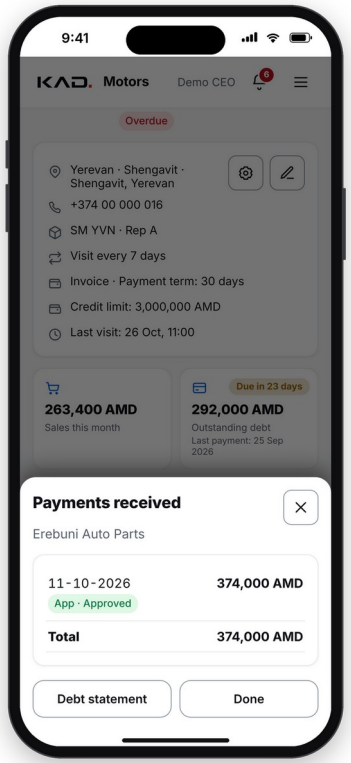

Saved: print

1. **Start the way you want**
   New order, the usual basket, or repeat a past order
2. **Pick products**
   Frequent products first; brand chips, search, stock shown
3. **Prices and offers applied**
   Customer-level prices; discounts up to 3% automatic
4. **Bigger discount? Ask in the app**
   The request goes straight to the manager to approve
5. **Live status**
   Submitted, confirmed, packed, delivered; everyone sees it
6. **Print, sign, photo**
   The order form is ready at once; the signed copy is uploaded

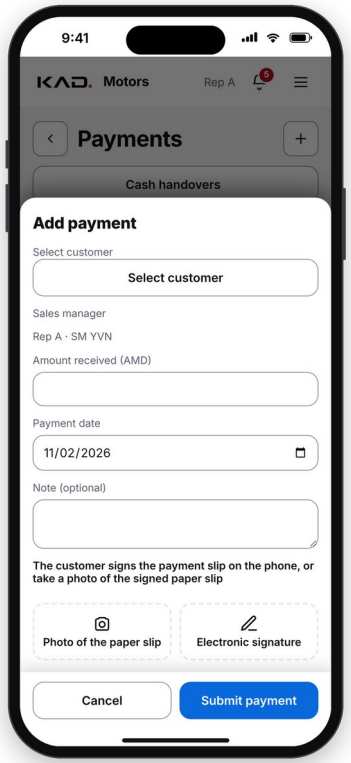

Why it matters for Castrol: the agreed price list and the offers are really applied in the field.

DEBT & CASH

Debt in the app: no call to accounting

Payments received

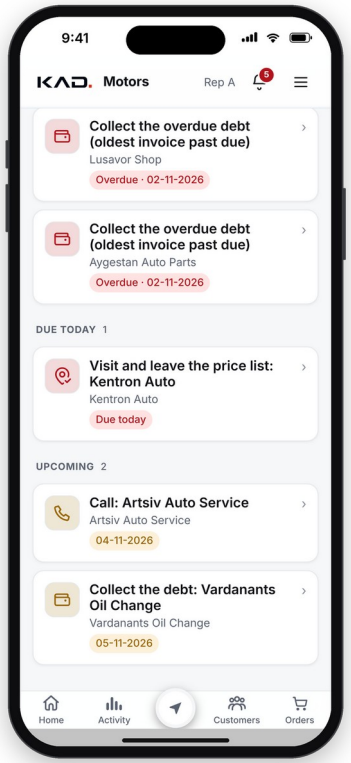

Record a payment

1. **Debt visible to the rep**
   Per customer and per invoice, with due dates; red when overdue
2. **No call to finance**
   The rep sees the amount to collect before the visit
3. **Collection task**
   Overdue debt becomes a task for the next visit
4. **Promise date**
   A broken promise goes to the sales director
5. **Payment at the visit**
   Recorded on the phone, followed until it reaches the accountant
6. **Credit limit**
   Over the limit, the order waits for approval

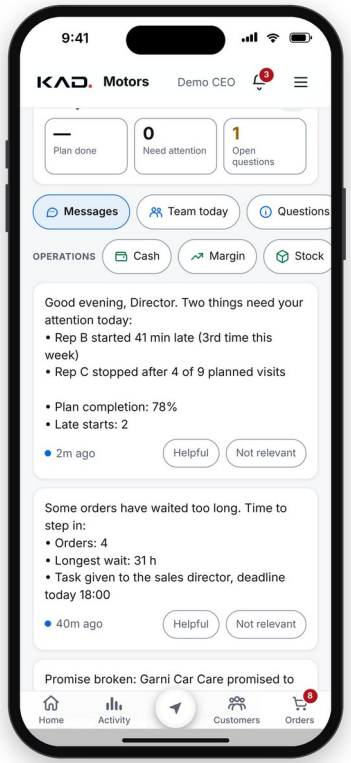

Why it matters for Castrol: healthy credit keeps the distributor buying, and reps spend their time selling.

TASKS & AI AGENT

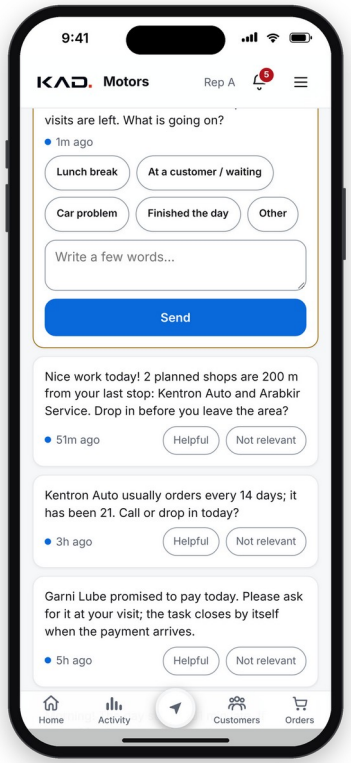

Tasks in the app, created by managers and by AI

Tasks

AI agent: management

AI agent: rep

1. **Manager reviews the visit**
   Sees everything the rep wrote, ticked and photographed
2. **Sets a task in one tap**
   For any customer, any rep, with a deadline
3. **The AI agent checks everything**
   Every visit, order and payment, one by one, every day
4. **It creates and follows tasks**
   Right person, deadline; closes by itself when done
5. **Management hears what slips**
   Formal with management, friendly with reps

Why it matters for Castrol: every problem found in the field becomes a task, and every task is followed to the end.

AI AGENT

How the AI agent decides, assigns and checks

Watches

Orders, payments, visits and check-ins, all day

Notices

Something differs from the customer's or rep's usual pattern

Assigns

A task to the right person, with a deadline

Checks

Closes the task by itself when the data shows it is done

Escalates

Tells management only when it keeps slipping

Customer stopped ordering

Notices: A customer usually orders every 2 weeks. This time no order came.

Does: Task for the rep: go and remind the customer.

Checks: Closes when the next order arrives.

Weekly payment missed

Notices: A customer pays every week. This week there is no payment.

Does: Task for the rep: collect the payment.

Checks: Closes by itself when the rep records the money on the customer card; no double work in Tasks.

Late arrival at the office

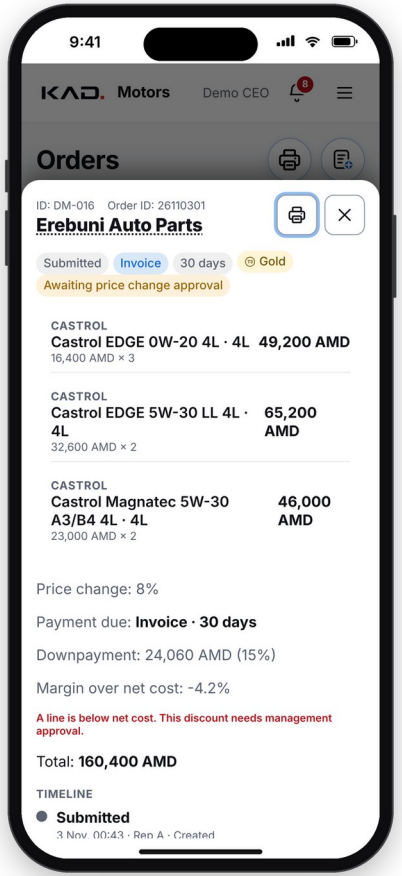

Notices: The team starts at the office and checks in there. Arrival is late.

Does: The agent notifies the rep and asks for the reason.

Checks: After the 3rd time, management is notified automatically.

HUMAN APPROVALS

Automation does the work; people approve

Order waiting for approval (demo)

Discounts above 3%

Management approves

Price below our cost

Only the CEO approves

Over the credit limit

Sales director or accountant approves

New orders

The sales director confirms

Invoices

The chief accountant approves and signs

Cash and payments

The accountant confirms what was received

Customer data changes by reps

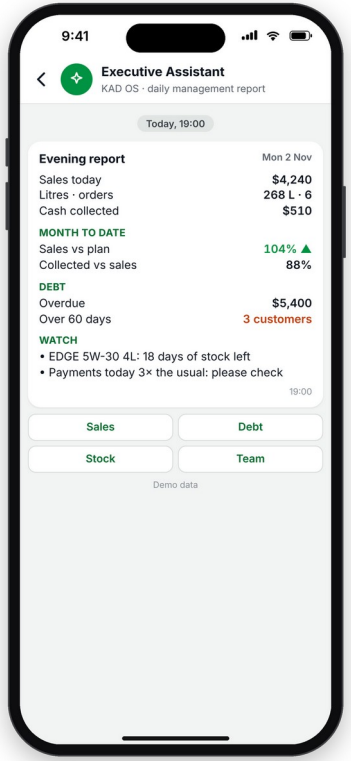

Management reviews them

The AI agent itself

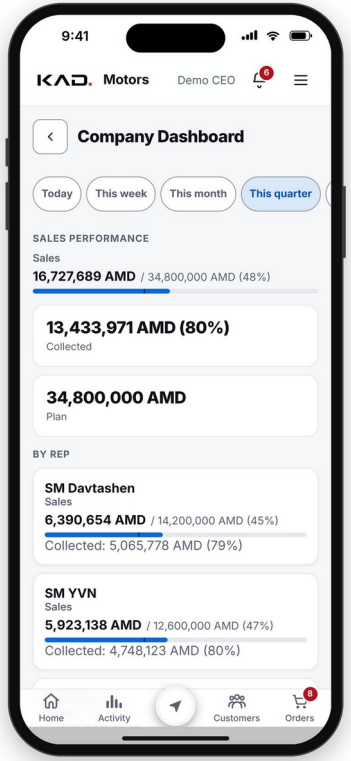

Starts in test mode; management tunes it, then switches it on

REPORTS

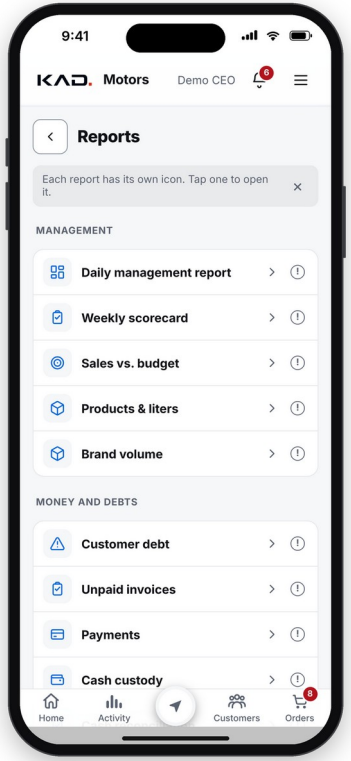

The numbers come to you: live, daily, weekly, monthly

Evening report

Dashboard

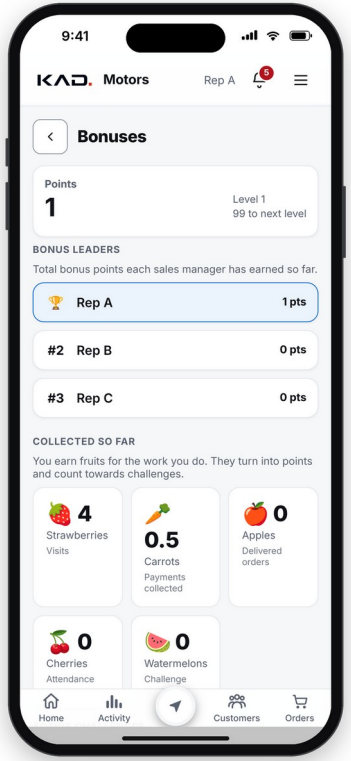

Reports

1. **Live dashboard**
   Sales against plan, by rep and by channel
2. **Evening report**
   Sales, volume, cash, debt and stock risks, every day
3. **Weekly and monthly**
   Longer summaries at the end of each period
4. **To anyone who needs it**
   Sales head, CEO, team leads; each sees their own scope
5. **Unusual numbers flagged**
   Anything far from normal is pointed out

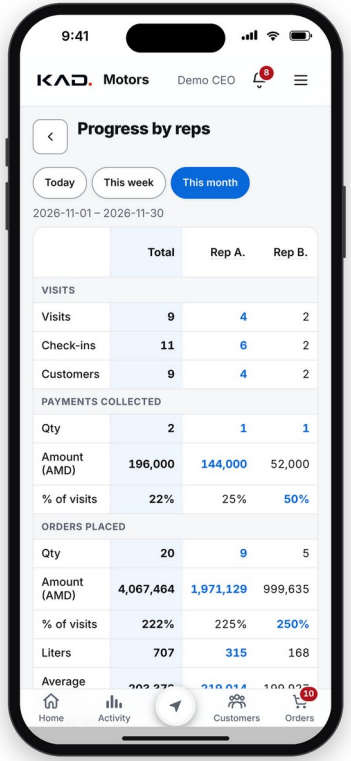

Why it matters for Castrol: nobody prepares the report: it is written from the work the team does in the app.

ADOPTION

How we got the whole team to use it

Bonuses and leaderboard

Progress by rep

1 **The hardest part**

New habits: at first not every visit was logged

2 **A bonus system**

Points for visits, payments, deliveries, attendance and challenges

3 **A monthly contest**

Most check-ins in the month wins a fixed bonus

4 **Visible to everyone**

Leaderboard and progress by rep, updated live

5 **Still running today**

Everything is logged, and the team works more actively

Why it matters for Castrol: complete field data only comes when the whole team uses the app every day.

BUILT AND ADOPTED

Live in 3 months, used by the whole team in the 4th month

3 months

from first line of code to the first live version

May → August 2026

COMING NEXT

Next: KAD OS for our customers

We are opening the app to our customers, so IWS can work with us directly.

Online orders

Order any time, at the customer's own prices

Offers and discounts

Promotions shown on the customer's dashboard

Orders and balance

Every order, its status, and the current balance

Notifications

Automatic, when an order is placed and when a payment arrives, cash or bank

Why it matters: no more manual updates to customers, fewer calls and errors, faster payments, and more frequent Castrol orders.

KAD OS

powered by Castrol

The operating system for a modern Castrol distributor.

Thank you. Questions?

THREE THINGS TO REMEMBER

1. Every visit is real

GPS-verified check-ins with a shelf check, competitors and a photo.

2. The brand sees every field

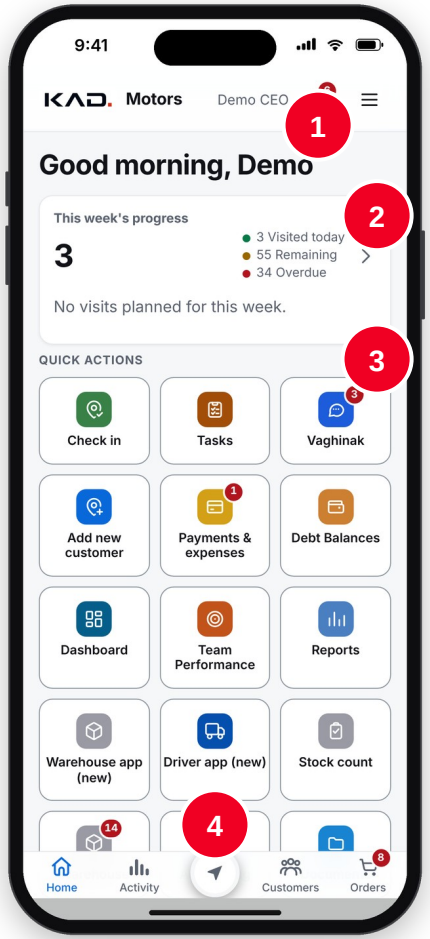

Shelf, fake product, competitors, potential customers and order rhythm.

3. The team stays on plan

Tasks and an AI agent; the whole team was in the app by month 4.

THE HOME SCREEN

One home screen: every part one tap away

1 **Notifications and menu**

Approvals, alerts and settings, top right

2 **This week's progress**

Visited today, remaining and overdue customers

3 **Quick actions**

Each tile opens a module (list on the right)

4 **Bottom bar**

Home, Activity, Map in the centre, Customers, Orders

QUICK ACTIONS

Stock count
daily counting

ACCOUNTING & INVOICING

Invoices and delivery documents are created by themselves

Accounting document

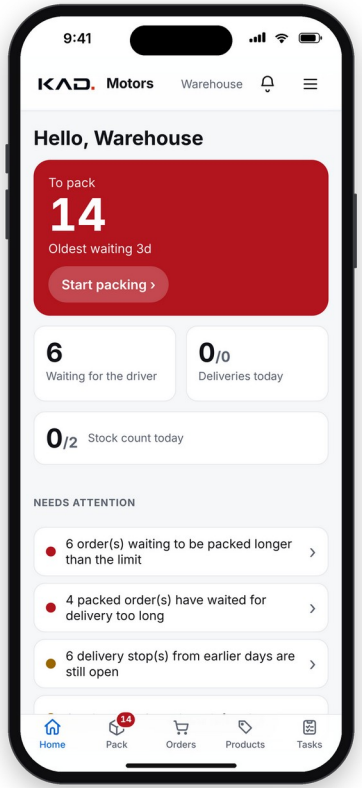

Payment: sign or photo

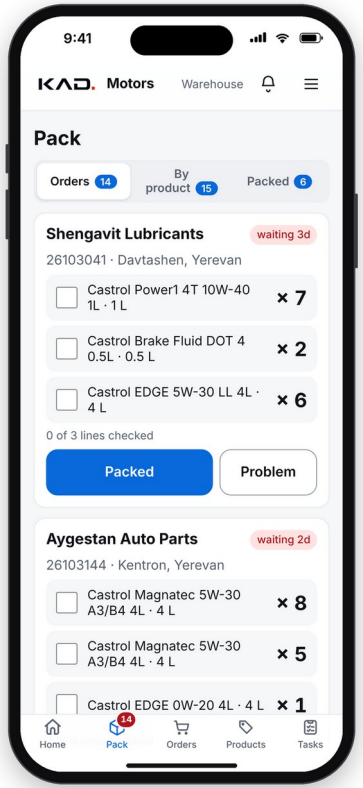

1. **Rep chooses the payment**
   Invoice or cash, while making the order
2. **Sales director approves**
   One tap confirms the order
3. **Invoice: created automatically**
   Our invoicing system is connected; the chief accountant only approves and signs
4. **Cash: delivery document ready**
   The driver cannot load goods without it; he gets a notification to download and print
5. **Signed copies come back**
   Customer signs on paper or on the phone; the rep uploads the photo
6. **Customer updates**
   Today we send them by hand; the customer app will show them automatically

WAREHOUSE

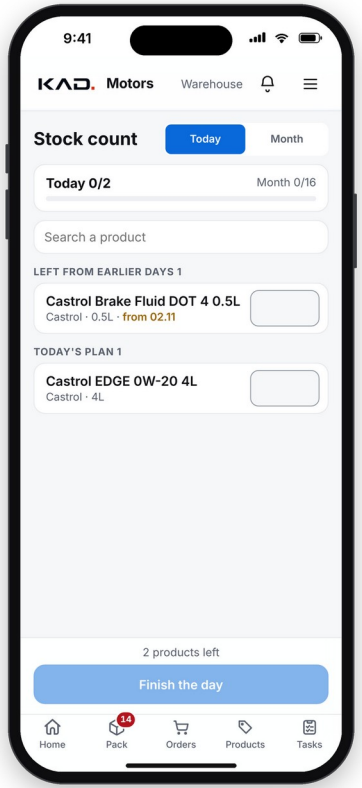

The warehouse packs from the phone

Warehouse home

Pack

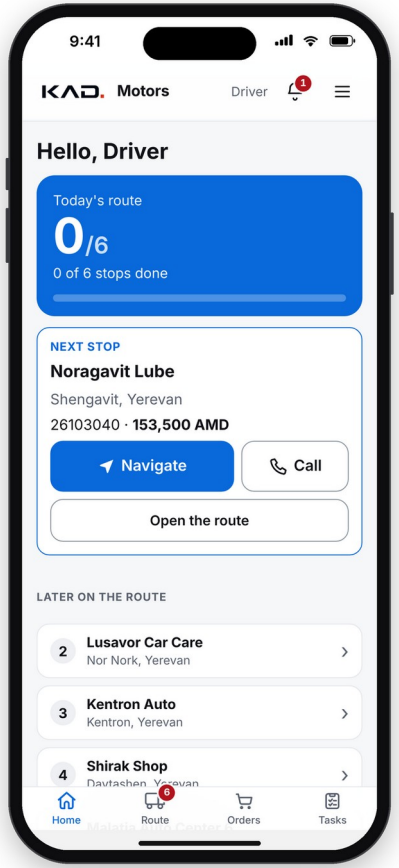

Stock count

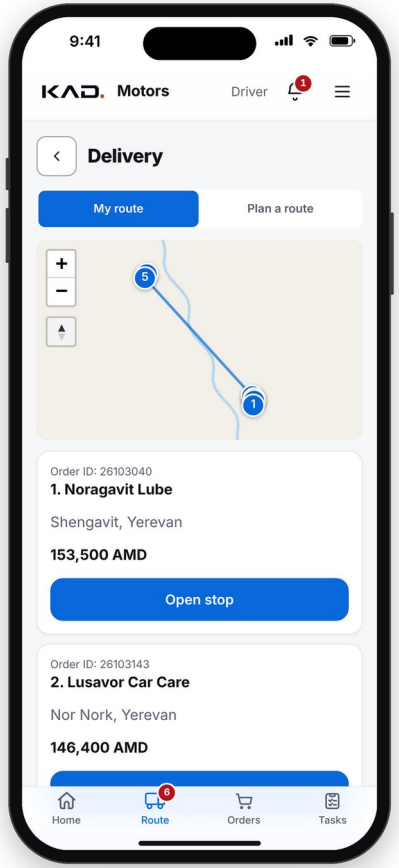

1. **What to do now**
   Home shows orders to pack, the oldest waiting, and what is late
2. **Pick and pack**
   One card per order: tick each line while picking, then Packed
3. **By product**
   One pick list across all orders; short stock in red
4. **Problem button**
   A missing product is reported, not hidden
5. **Daily stock count**
   Every product counted once a month, a few each day, blind
6. **Reorder list**
   Days of stock left and what to buy

DELIVERY & DRIVER

Deliveries on an optimised route, signed on the phone

Driver home

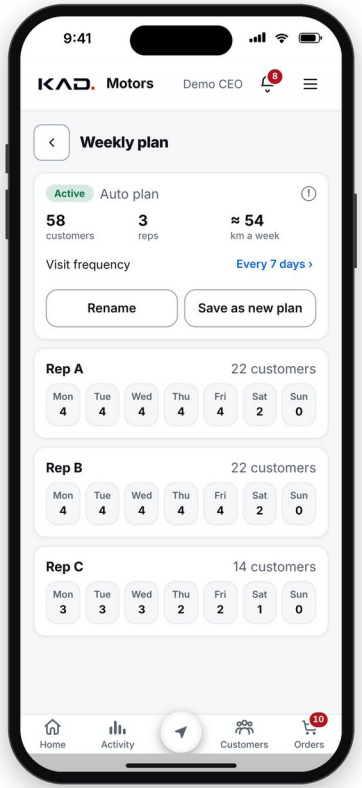

Route

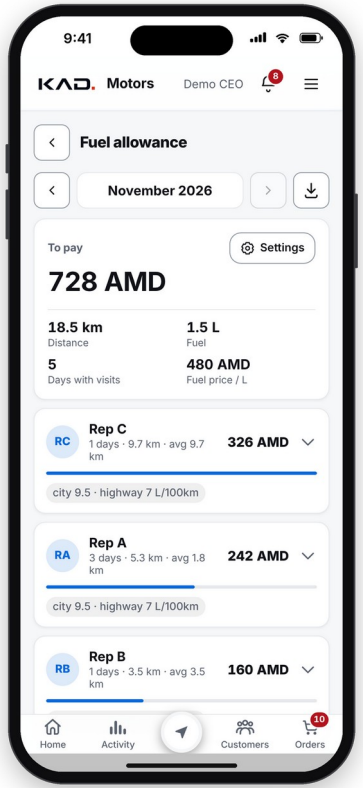

1. **Route in one tap**
   Packed orders become a route in the shortest order
2. **Next stop first**
   Navigate and Call buttons; later stops below
3. **Arrival detected**
   When the driver reaches the customer: off, one-tap Delivered, or automatic
4. **Customer signs**
   Signature on the phone; cash collected is recorded
5. **Failed delivery**
   A reason is recorded and the order goes back to the plan
6. **Everyone sees it**
   The order turns Delivered for the rep and the office

ROUTES & FUEL

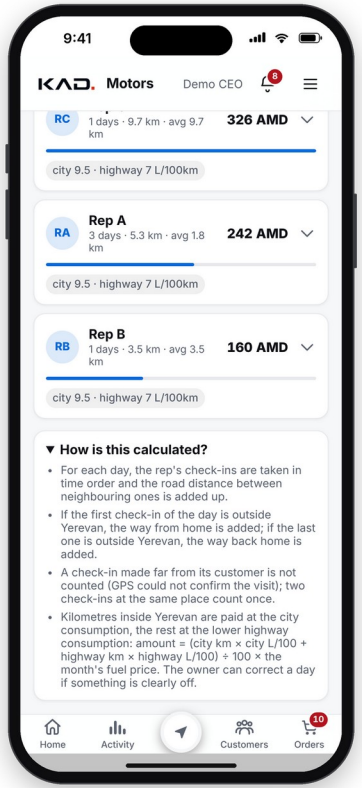

Weekly routes for every rep, and a fair fuel allowance

Weekly route plan

Fuel allowance

How it is calculated

1 Weekly route plan

Built automatically: each rep's customers spread over the week, nearby shops on the same day

2 The real route of the day

The day's check-ins in time order; the road distance between them is added up

3 Only real visits count

A check-in far from its customer is left out; check-ins at one place count once

4 Home legs outside Yerevan

If the day starts or ends outside the city, the way from and back home is added

5 City and highway

Km inside the city at the rep's city consumption, the rest at the lower highway rate

6 Amount

Litres x the month's fuel price; unusual days are flagged and management can correct them

AI AND AUTOMATION

AI and automatic calculations do the routine work

AI analyst: ask your data

Management asks a question in plain words and gets an answer with numbers:

“Which customers bought less EDGE this quarter, and who is their rep?”

Customers and staff are hidden behind codes

Read-only, every question logged

CALCULATED AUTOMATICALLY

- Landing cost of every product
- True cost at the selling price, for each discount
- Debt age of every invoice
- Suggested credit limit per customer
- Each customer's usual basket and order rhythm
- Days of stock left and what to reorder
- Optimised delivery route
- Rep working hours and weekly scorecards
- Fuel allowance from the real GPS route

BUILT FOR REAL FIELD WORK

Works on any phone, fast, offline and secure

Any phone or PC

Opens from a link; no app store

Works offline

Visits, orders and counts wait on the phone and send later

Fast on cheap phones

Speed is tested on a slow phone

Role-based access

Everyone sees only what their role allows

Secure

Encrypted connection, protected logins, audit trail

Data stays with us

Our data lives in a cloud system
