KAD OS

powered by Castrol

The operating system for a modern Castrol distributor.

One app for everyone in a Castrol distributor: field sales, customers, orders, credit, cash, the team and management reports in one system, with AI that keeps everyone on plan. It opens from a link on any phone or PC, with no app store, and works without signal.

PROBLEMS IT SOLVES

Visits nobody can check **GPS check-in with a photo at the outlet**	**Orders by phone, wrong prices** **Orders in the app at fixed price lists**
Overdue debt found too late **Debt per invoice and automatic collection tasks**	**No view of the shelf** **A Castrol shelf check at every visit**
Reports that take days **Live dashboards and an evening report**	**Problems noticed too late** **An AI deputy director gives and chases tasks**

HOW IT WORKS

1. The team works in the app
Visits, orders and payments recorded where they happen

2. KAD OS checks the rules
Prices, discounts, credit and stock, at once

3. AI spots problems
A task to the right person, with a deadline

4. Management sees it live
Dashboards, reports, evening summary

WHAT IS INSIDE

Visits & shelf check · **Customers & map** · **Visit plans & routes** · **Orders & price lists** · **Credit, debt & cash** · **Targets & bonuses** · **Dashboards & reports** · **Executive Assistant** · **AI deputy director** · **AI analyst** · **Integration API** · Delivery & Driver: next · Warehouse: next

AI deputy director: watches the working day, reminds reps about planned visits, chases overdue debt and broken promises, gives each task to the right person with a deadline, and tells management only what slips.

BUILT AND ADOPTED

2 days
from first line of code to the first live version (22 → 24 Aug 2026)

1st month
the whole field team working in the app (September 2026)

10 weeks
to the complete system, with weekly updates
